Positive Reinforcement: Training Your Dog Or Cat With Treats And Praise

Used with the permission of Denver Dumb Friends League and Humane Society of the United States.

Positive reinforcement is the presentation of something pleasant or rewarding immediately following a behavior. It makes that behavior more likely to occur in the future, and is one of the most powerful tools for shaping or changing your pet's behavior.

Correct timing is essential when using positive reinforcement. The reward must occur immediately, or your pet may not associate it with the proper action. For example, if you have your dog "sit," but reward him after he's already stood up again, he'll think he's being rewarded for standing up.

Consistency is also essential. Everyone in the family should use the same commands. It might be helpful to post these where everyone can become familiar with them. The most commonly used commands for dogs are "watch me," "sit," "stay," "down" (means lie down), "off" (means off of me or off the furniture), "stand," "come," "heel," (or "let's go" or "with me") "leave it" and "settle." Consistency means always rewarding the desired behavior and never rewarding undesired behavior.

For your pet, positive reinforcement may include food treats, praise, petting or a favorite toy or game. Food treats work especially well for training your dog. A treat should be enticing and irresistible to your pet. It should be a very small, soft, piece of food, so that he will immediately gulp it down and look to you for more. If you give him something he has to chew or that breaks into bits and falls on the floor, he'll be looking around the floor, not at you. Small pieces of soft commercial treats, hot dogs, cheese, cooked chicken or beef, or miniature marshmallows have all proven successful. Experiment a bit to see what works best for your pet. You may carry the treats in a pocket or a fanny pack on the front of your belt. There are even special treat packs available in many pet stores. Each time you use a food reward, you should couple it with a verbal reward (praise). Say something like, "Good boy" in a positive, happy tone of voice.

Note: Some pets may not be interested in food treats. For those pets, the reward could be in the form of a toy or brief play.

When your pet is learning a new behavior, he should be rewarded every time he does the behavior (continuous reinforcement). It may be necessary to use "shaping," with your pet (reinforcing something close to the desired response and gradually requiring more from your dog before he gets the treat). For example, if you're teaching your dog to "shake hands," you may initially reward him for lifting his paw off the ground, then for lifting it higher, then for touching your hand, then for letting you hold his paw and finally, for actually shaking hands with you.

Intermittent reinforcement can be used once your pet has reliably learned the behavior. At first, you may reward him with the treat three times out of four, then about half the time, then about a third of the time and so forth, until you're only rewarding him occasionally with the treat. Continue to praise him every time, although once he's learned the behavior, the praise can be less effusive - a quiet, but positive, "Good boy." Use a variable schedule of reinforcement, so he doesn't catch on that he

only has to respond every other time. Your pet will learn that if he keeps responding, eventually he'll get what he wants. If you have a dog who barks until you reward him by paying attention to him, you've seen the power of intermittent reinforcement.

By understanding reinforcement, you can see that you're not forever bound to carry a pocketful of goodies. Your pet will soon be working for your verbal praise, because he really does want to please you and he knows that occasionally, he'll get a treat, too! There are many small opportunities to reinforce his behavior. You may have him "sit" before letting him out the door (helps prevent door-darting), before petting him (helps prevent jumping up on people) or before giving him his food. Give him a pat or a "Good dog" for lying quietly by your feet or slip a treat into his Kong toy when he's chewing it, instead of your shoe.

Punishment, including verbal, postural and physical, is the presentation of something unpleasant immediately following a behavior which makes it less likely that the behavior will occur again. To be effective, punishment must be delivered while your pet is engaged in the undesirable behavior, in other words, "caught in the act." If the punishment is delivered too late, your pet will feel "ambushed." From his point of view, the punishment is totally unpredictable, and he's likely to become fearful, distrusting and/or aggressive. This will only lead to more behavior problems. What we humans interpret as "guilty" looks, are actually submissive postures by our pets. Animals don't have a moral sense of right and wrong, but they are adept at associating your presence and the presence of a mess, with punishment.

If you've tried punishment and it hasn't worked, you should definitely stop using punishment and use positive reinforcement instead. Physical punishment usually involves some level of discomfort or even pain, which is likely to cause your pet to bite, as that is the only way he knows to defend himself. Scruff shakes and "alpha rolls" are likely to result in bites, especially if the dog doesn't perceive you to be his superior. Also, punishment might be associated with other stimuli, including people that are present at the time the punishment occurs. For example, a pet that's punished for getting too close to a small child may become fearful of or aggressive to that child.
