AIR QUALITY PERMIT
(As require by Title 17.12, Article II, Pima County Code)

DAVIS-MONTHAN AFB
SIC CODE, MAJOR GROUP ‘42’
SPECIAL WAREHOUSING AND STORAGE
3775 S. 5TH ST.
TUCSON, AZ 85707

This air quality permit does not relieve applicant of responsibility for meeting all air pollution regulations

THIS PERMIT ISSUED SUBJECT TO THE SPECIFIC AND GENERAL CONDITIONS IDENTIFIED IN THIS PERMIT

PERMIT NUMBER 3000
ISSUED: November 11, 2016

PERMIT CLASS II
EXPIRES: November 10, 2021

Rupesh Patel, Air Permit Manager, PDEQ

Section 8 – Specific Applicability

Permitted Facility Sources

- Permit-Wide Operations
- Special Warehousing Operations
- Fossil Fuel Fired Industrial and Commercial Equipment (Boilers and Heaters)
- Stationary Rotating Machinery
- Emissions from New and Existing Nonpoint Sources
- Local (New and Existing) Stationary Source Performance Standards
- Exempt Sources

General Conditions

Attachment 1: Applicable Regulations
Attachment 2: Equipment List
Attachment 3: List of Insignificant Activities
Attachment 4: Emissions Discharge Opacity Limiting Standards
Attachment 5: Sample Portable Source Location Log
Attachment 6: Calculation of VOC Emission Rate From Enclosed Surface Coating Operation
PERMIT SUMMARY

Location Information

This air permit is issued to an existing source operated by Davis-Monthan Air Force Base (DMAFB), the Permittee. The administrative offices are located at 3755 S. 5th Street, Tucson, AZ. The facility is located on parcels identified by Pima County Assessor’s Parcel #’s: 132-01-001A, 132-02-010, 132-03-010, 132-24-008E, 132-26-010, 132-27-010, 136-27-(010-030), 140-01-(10-20, 1090, & 1100), 141-02-(040-070).

Source Description

All pollutant-emitting activities (operations) at DMAFB fall under the following functionally distinct primary SIC Code groupings which are covered under the following distinct Class II/III air permits:

- Permit # 3000: DMAFB, Major Group – 42 – Special Warehousing and Storage
- Permit # 3001: DMAFB, Major Group – 45 – Transportation by Air
- Permit # 3002: DMAFB, Major Group – 49 – Electric, Gas, and Sanitary Services
- Permit # 3004: DMAFB, Major Group – 65 – Real Estate
- Permit # 3005: DMAFB, Major Group – 80 – Health Services
- Permit # 3006: DMAFB, Major Group – 97 – National Security and International Affairs

The activities and operations covered by this permit are those stationary sources at Davis-Monthan AFB located at the 309th Aerospace Maintenance and Regeneration Group (309th AMRG) “facility” and its supporting units [309th Support Squadron (309th SPTS), the 576th Aerospace Maintenance and Regeneration Squadron (576th AMRS), the 577th Commodities Reclamation Squadron (577th CMRS) and the 578th Storage and Disposal Squadron (578th SDS)] which fall under the following industrial classification:

- SIC Code: Major Group 42 - Special Warehousing and Storage (NAICS 493190)

The activities and operations at the facility includes: aircraft engine testing, abrasive blasting operations, surface coating operations, solvent degreasing/cleaning operations, stationary rotating machinery, fuel storage and dispensing facilities, and emissions from existing and new nonpoint sources (fugitive dust).

Air Permit Information

This is the first renewal of the existing 5 year air quality permit. This permit incorporates voluntarily proposed emission limitations to keep HAP(s) and VOC emissions below major source thresholds.

The following table summarizes the potential to emit of the source with limitations. These emission values are a taken from the information contained in the renewal application and from standard emission factors in AP-42 Sections 1.4, 3.3, and 3.4. The emission values are for information purposes only and are not intended to be enforceable limits.

1 Emergency generator engine PTE is calculated on operation as an emergency generator (500 hour/year). Boiler PTE is calculated on unlimited operation when firing natural gas. GDF PTE is calculated on voluntary throughput limitations. Includes 65 ton/year VOC emission cap for enclosed surface coating operations.
**Section 1 – General Applicability**

**SPECIFIC CONDITIONS**
[References are to Title 17 of the Pima County Code [PCC] unless otherwise noted]

**SECTION 1: GENERAL APPLICABILITY**

1. **Statutory Authority**

   Emissions from this facility, specifically the emissions from the equipment described in Attachment 2 of this permit, fall under primary SIC Code, Major Grouping ‘42’, and are subject to enforceable limitations as provided in the Specific Conditions contained in this permit. This air permit is issued pursuant to (ARS) §49-480 and authorizes the construction and operation of the equipment enumerated in the “Equipment List” in Attachment 2. This authorization is based on the regulations in effect on the date of issuance of this permit, and a finding that the allowable emissions from this permit, and all other installations that fall under functionally distinct primary SIC code groupings, more fully described in the applications for permits under SIC Codes, Major Groups, 42, 45, 49, 65, 80, and 97, do not constitute a "major source" within the meaning of PCC 17.04.340.A.128. Notwithstanding the above findings, the issuance of this air quality permit shall not relieve the Permittee from compliance with all local, county, state and federal laws, statutes, and codes.

2. **Permit Classification**

   Class II; Synthetic Minor Source; Stationary: The permitted facility sources constitute a stationary synthetic minor source of HAP and VOC based on voluntary limitations and operating restrictions contained in this permit and when considering emissions from sources aggregated under the same primary SIC Code grouping (Major Group 42 – Special Warehousing and Storage).

3. **Permitted Facility Sources**

   The Specific Conditions contained in this permit apply to the equipment listed in Attachment 2 of this permit and the following source categories. Section 8 of this permit contains conditions relating the specific applicability to the permitted facility sources.

   - a. Aircraft engine testing operations
   - b. Abrasive blasting operations
   - c. Enclosed surface coating operations
   - d. Solvent degreasing operations
   - e. Architectural coating operations
   - f. Miscellaneous chemical/materials use
   - g. Boilers, heaters, and other fuel fired equipment
   - h. Stationary rotating machinery
   - i. Fuel storage and dispensing facilities
   - j. Emissions from new and existing nonpoint sources

4. **Permit Sections**

   The Specific Conditions have been organized into the following permit sections:

   - Section 1 – (This Section)
   - Section 2 – Permit-Wide Operations
   - Section 3 – Special Warehousing
   - Section 4 – Fossil Fuel Fired Industrial Commercial Equipment
   - Section 5 – Stationary Rotating Machinery
   - Section 6 – Fuel Storage and Dispensing Facilities
   - Section 7 – Emissions from Existing and New Nonpoint Sources
   - Section 8 – Specific Applicability Provisions

5. **Applicability of more than one standard**

   If more than one emission limit or emission standard in this permit is applicable to the same source, the more stringent standard or emission limit shall apply.

   [PCC 17.16.010.B]

   [Locally Enforceable Condition]
SECTION 2: PERMIT-WIDE OPERATIONS

In accordance with condition 63.a, the provisions in this Section apply to permit-wide operations and all sources of air contaminants. All provisions in this Section are locally enforceable unless otherwise noted.  

[PCC 17.16.010.B]

Emission Limitations and Standards  

6. **Voluntary Emission Limitations**  

The Permittee shall comply with the operating limitations in Sections 3 through 6 of this permit and the following voluntary emission limitations in order to avoid federal or other applicable requirements: 

[Federally Enforceable and Material Permit Conditions]

a. The Permittee shall not allow the emission rate of combined Hazardous Air Pollutants (HAPs) from sources and operations covered under this permit to exceed 3.5 tons per year as measured on a 12 month rolling total basis.

b. The Permittee shall not allow the base-wide emission rate of combined Hazardous Air Pollutants (HAPs) to exceed 22.5 tons per year as measured on a 12 month rolling total basis.

c. The Permittee shall not allow the base-wide emission rate of any single Hazardous Air Pollutant (HAP) to exceed 9 tons per year as measured on a 12 month rolling total basis.

7. **General Control Standards**

a. The Permittee shall not cause or permit the planning, construction, installation, erection, modification, use or operation of an emission source which will cause or contribute to a violation of a performance standard in Title 17 of the Pima County Code.  

b. The Permittee is prohibited from firing high sulfur oil in any stationary or portable source without submitting a revision, as provided in V of this Section, demonstrating to the satisfaction of the Control Officer, both that sufficient quantities of low sulfur oil are not available for use by the Permittee, and that the Permittee has adequate facilities and contingency plans to ensure that the sulfur dioxide ambient air quality standards will not be violated. For purposes of this paragraph “high sulfur oil” means oil containing 0.90 percent or more by weight of sulfur. Notwithstanding the prohibition to use high sulfur oil, the Specific Conditions contained in this permit may prescribe lower fuel sulfur content limits for specific stationary or portable sources. 

   [PCC 17.12.185.A.2]

   [Material Permit Condition]

c. Where a stack, vent or other outlet is at such a level that fumes, gas mist, odor, smoke, vapor or any combination thereof constituting air pollution are discharged to adjoining property, the Control Officer may require the installation of abatement equipment or the alteration of such stack, vent or other outlet by the owner or operator thereof to a degree that will adequately reduce or eliminate the discharge of air pollution to adjoining property.  

   [PCC 17.16.020.B]

8. **Materials Handling Standards**

a. The Permittee shall not transport or store VOC’s without taking necessary and feasible measures to control evaporation, leakage, or other discharge into the atmosphere.  

   [PCC 17.16.400.A]
b. Materials including solvents or other volatile compounds, paints, acids, alkalis, pesticides, fertilizers, and manure shall be processed, stored, used and transported in such a manner and by such means that they will not evaporate, leak, escape or be otherwise discharged into the ambient air so as to cause or contribute to air pollution. Where means are available to reduce effectively the contribution to air pollution from evaporation, leakage or discharge, the installation and use of such control methods, devices, or equipment shall be mandatory.

9. **Odor Limiting Standard**

The Permittee shall not emit gaseous or odorous materials from equipment, operations or premises under his control in such quantities or concentrations as to cause air pollution. Emissions from malodorous matter shall not cross a property line without minimizing the emissions by applying modern practices. Malodorous matter shall include, but not be limited to, solvents, paints, acids, alkalis, pesticides, fertilizer and manure.

10. **Opacity Limit**

Except as otherwise specified in the Specific Conditions of this permit and the Table in Attachment 4, the opacity of all plumes and effluents from all point, non-point, or fugitive emission sources shall not exceed 20% as determined by EPA Reference Method 9, Appendix A, 40 CFR Part 60.

11. **Visibility Limiting Standard**

a. The Permittee shall not cause, suffer, allow or permit operations or activities likely to result in excessive amounts of airborne dust without taking reasonable precautions to prevent excessive amounts of particulate matter from becoming airborne in accordance with Section 7 of this permit.

b. The Permittee shall not cause, suffer, allow, or permit diffusion of visible emissions, including fugitive dust, beyond the property boundary line within which the emissions become airborne, without taking reasonably necessary and feasible precautions to control generation of airborne particulate matter in accordance with Section 7 of this.

Permit. Sources may be required to cease temporarily the activity or operation which is causing or contributing to the emissions until reasonably necessary and feasible precautions are taken.
i. Condition 11.b shall not apply when wind speeds exceed twenty-five (25) miles per hour (using the Beaufort Scale of Wind-Speed Equivalents, or as recorded by the National Weather Service). This exception does not apply if control measures have not been taken or were not commensurate with the size or scope of the emission source.

ii. Condition 11.b shall not apply to the generation of airborne particulate matter from undisturbed land.

12. Authorization to Conduct Fugitive Dust Producing Activities

a. The Permittee is responsible for controlling windblown dust, dust from haul roads, and dust emitted from land clearing, earthmoving, demolition, trenching, blasting, road construction, mining, racing event, and other activities in accordance with Section 7 of this permit to ensure compliance with conditions 10 and 11.

i. Until the area becomes permanently stabilized by paving, landscaping or otherwise, dust emissions shall be controlled by applying adequate amounts of water, chemical stabilizer, or other effective dust suppressant.

ii. The Permittee shall not leave land in such a state that fugitive dust emissions (including windblown dust or dust caused by vehicular traffic on the area) would violate conditions 10 or 11.

b. This subsection shall not relieve the Permittee, or subcontractors, from compliance with all local, county, state, and federal laws, statutes, and codes or from obtaining permits for other operations or activities when required.

13. Disposition of Portable Sources

For the purpose of this subsection, “portable source” means any building, structure, facility, or installation that emits or may emit any air pollutant and is capable of being operated at more than one location. “Major source threshold” means the lowest applicable emission rate for a pollutant that would cause the source to be major at the particular time and location under PCC 17.04.340.128.

a. Portable sources, including transportable non-road engines, that do not require a permit pursuant to Title 17 of the PCC, that have a potential to emit (PTE) in excess of the levels deemed by the Control Officer to be insignificant activities due to their size or production rate, may be required to demonstrate when the portable equipment was moved or relocated from a storage area to a location on the property to establish that the source is not subject to regulation as a stationary source. For the purpose of this condition, portable sources that can be moved by hand or have a combined potential to emit, without controls, less than 10% of the major source threshold shall be deemed to be insignificant activities.

b. The Permittee shall not allow the combined potential to emit (PTE) of the sources covered by this permit and co-located portable sources subject to condition 13.b.i as stated below, to exceed the major source threshold, without first applying for a permit revision as provided in condition 25.

i. The Permittee shall consider the emission rate of co-located portable sources that require a permit, pursuant to Title 17 of the PCC, in the emission limitations established by this permit, if the portable source is located onsite for more than 6-months and meets either of the following conditions:
(a) The portable source is considered a pollutant emitting activity belonging to the same industrial grouping as sources covered by this permit, is located on one or more contiguous or adjacent properties, and is under the control of the same person, or under the common control of the same person. For the purpose of this provision, pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same major group which has the same two-digit code, as described in the Standard Industrial Classification (SIC) Manual, 1972, as amended by the 1987 supplement; or

(b) The portable source is located on one or more contiguous or adjacent properties owned and operated by the Permittee, and while classified under a different major group which has a different two digit SIC code, may be considered an aggregated support facility belonging to the same industrial grouping and under common control through a support/dependency relationship, wherein the portable source supports, or is supported by the Permittee with more than 50% of the raw materials or product.

14. *Asbestos Requirements for Demolition and Renovation Activities*

The Permittee shall not allow or commence demolition or renovation of any NESHAP facility, as defined in 40 CFR Part 61, Subpart M, National Emission Standards for Hazardous Air Pollutants – Asbestos, without first obtaining an activity permit from the Control Officer. Should this stationary source, pursuant to 40 CFR Part 61, Subpart M, become subject to asbestos regulations when conducting any renovation or demolition at this premises, then the Permittee or operator shall submit proper notification as described in 40 CFR Part 61, Subpart M and shall comply with all other applicable requirements of Subpart M. The Permittee shall keep a record of all relevant paperwork on file. [PCC 17.12.475 & 40 CFR 61, Subpart M]

**Monitoring Requirements**

[PCC 17.12.185.A.3]

15. *Visible Emissions (VE)*

If at any time, or while conducting an opacity check required by the Specific Conditions in this permit, the Permittee sees any plume or effluent from a facility source, that on an instantaneous basis, appears to exceed the opacity limit, or if visible emissions including fugitive dust, diffuse beyond the property boundary line, the Permittee shall investigate the source of the emissions and if required take corrective action. If the plume persists, or the activity or operation which is causing or contributing to the emissions cannot be corrected or halted, the Permittee shall make a visual determination of the opacity in accordance with condition 10 when practicable. If the VE determination exceeds the applicable opacity limit, or if visible emissions, including fugitive dust, diffuse beyond the property boundary line, the Permittee shall report this as an excess emission in accordance with condition 22. [PCC 17.16.040, PCC 17.16.50.B]

16. *Disposition of Portable Sources*

a. The Permittee shall keep complete records of the materials used as fuel in any portable sources that are not fueled by natural gas or propane. [PCC 17.16.010.C]

b. The Permittee shall keep complete records, as needed, to demonstrate that portable sources that do not require a permit, as provided in condition 13.a, are not subject to regulation as a stationary source. The Permittee may use the sample portable source relocation log in Attachment 5 of this permit to demonstrate the portable source’s status.

c. The Permittee shall keep complete records, as needed, demonstrating that the combined emissions rate of co-located portable sources that require a permit as provided in condition 13.b and sources covered by this permit do not exceed the major source threshold or the voluntary HAP emission limitations in condition 6.
17. **Permit-Wide Standards**

Except as provided in conditions 15, 16, 21, and 27 of this Section or as otherwise required by the Specific Conditions in this permit, additional monitoring for compliance with the permit-wide standards in conditions 6 through 14 shall not be necessary. The Control Officer may ask the Permittee to conduct additional monitoring if the Control Officer has reasonable cause to believe a violation of the permit-wide standards has been committed.

**Recordkeeping Requirements**

18. **Monitoring Records**

The Permittee shall maintain records of required monitoring information. Records shall include at a minimum:

a. The date, time, and the place defined in the permit requiring the measurement, sampling, inspection, or observation;

b. The name of the person conducting the measurement, sampling, inspection or observation;

c. The particular piece of equipment, process, or area being measured, sampled, inspected or observed including a description of the operating conditions and monitoring techniques or methods used as applicable; and,

d. The results of the measurement, sampling, inspection or observation, including any discrepancy or excess emissions. If there are any monitoring discrepancies or excess emissions, the record shall include the corrective action taken.

19. **Record Retention**

The Permittee shall retain records of all required monitoring and support information for at least 5 years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records, and copies of all reports required by the permit.

20. **Recordkeeping for Compliance Determination**

The Permittee shall retain a copy of the permit onsite including all required monitoring records and support information for review by the Control Officer. In addition, all equipment identified in the permit equipment list shall be marked with a unique, clearly visible, and accessible ID to identify the piece of equipment. The Permittee shall be considered in compliance by demonstrating that sufficient information on the equipment and facility operations is periodically collected, recorded, and maintained to assure that the compliance status of any Specific Condition of this permit can be readily ascertained at any time.

**Reporting Requirements**

21. **Special Annual Reporting**

The Permittee shall submit an annual report to the Control Officer due on April 30th of each year, covering the period April 1st of the previous year through March 31st of the current year, documenting compliance with the voluntary HAP limitations in condition 6. The report shall contain the following:
Section 2 – Permit-Wide Operations

22. **Excess Emissions Reporting:**

   The Permittee shall report to the Control Officer any emissions in excess of the limits established by this permit in accordance with condition 2 of the General Conditions.

23. **Emissions Inventory Reporting**

   When requested by the Control Officer, the Permittee shall complete and submit an annual emissions inventory questionnaire. The questionnaire is due by March 31 or ninety days after the Control Officer makes request and inventory form available, whichever occurs later, and shall include emission information for the previous calendar year. The questionnaire shall be on a form provided by or approved by the Control Officer and shall include the information required by PCC 17.12.320.

24. **Certification of Truth Accuracy and Completeness**

   All reports required by this permit shall contain certification by a responsible official of truth, accuracy and completeness. The certification shall state that based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

### Facility Changes

25. **Permit Revision Application**

   Before installing additional emission sources, modifying existing emission sources, switching fuels, or changing the method of operation at the facility such that the changes increase actual emissions more than 10% of the major source threshold, the Permittee shall, if applicable, apply for the appropriate revision in accordance with PCC 17.12.235, PCC 17.12.255, or PCC 17.12.260.

26. **Notification**

   For facility changes that do not require revision, the Permittee may make the changes if written notice is provided to the Control Officer in advance of the changes in accordance with PCC 17.12.240.C.
27. **Facility Change Log**

The Permittee shall maintain a log of other facility changes that do not require revision or notice in accordance with PCC 17.12.240.B.

**Testing Requirements**

28. **Test Methods for Demonstration of Compliance**

For purposes of demonstrating compliance with the Specific Conditions in this permit, the testing provisions in this subsection shall be used, provided that for the purpose of establishing whether or not the facility has violated or is in violation of any condition in this permit, nothing in this permit shall preclude the use, including the exclusive use, of any credible evidence or information relevant to whether a source would have been in compliance with applicable federal requirements if the appropriate performance or compliance procedures or methods had been performed. Unless otherwise noted, the following test methods and standards are from 40 CFR Part 60, Appendix A or incorporated by reference in 40 CFR §60.17.

a. **Opacity**

When required, EPA Test Method 9 shall be used to monitor compliance with the opacity standards identified in this Permit.

b. **Alternative Test Plan**

When required, the Permittee may submit an alternate and equivalent test method(s) that is listed in 40 CFR Subpart 60, Appendix A, to the Control Officer in a test plan, for approval by the Control Officer.

c. **Fuel Limitations**

Documentation, such as invoices or statements from the fuel supplier, showing the fuels delivered and verifying the fuel sulfur content is below applicable standards shall be an acceptable means to demonstrate compliance with fuel limitations identified in this Permit. If otherwise required or when requested by the Control Officer, the fuel sulfur content of fuels shall be determined using ASTM D129, D1266, D1552, D2622, D4294, D5453 or an equivalent for liquid fuels, and ASTM D1072, D3246, D4084, D4468, D4810, D6228, D6667, Gas Processors Association Standard 2377, or an equivalent for gaseous fuels.

d. **Test Protocols and Guidelines**

Except as provided in the Specific Conditions in this permit, should the Permittee desire, or be required, to perform testing to demonstrate compliance with the standards contained in the Specific Conditions of this permit, the Permittee shall contact the Control Officer for test methods, protocols, and guidelines.
SECTION 3: SPECIAL WAREHOUSING OPERATIONS

In accordance with condition 63.b, the provisions in this Section are applicable to the equipment and operations listed in Tables 1 through 5 of Attachment 2. All Provisions of this section are locally enforceable unless otherwise noted.

Emission Limitations and Standards

29. Aircraft Engine Testing Operations (Test Cells)

a. The Permittee shall conduct no more than 800 engine tests or shall not combust more than 150,000 gallons of fuel in jet test cell - JET7099-01 in any 12-consecutive month period.

b. The Permittee shall conduct no more than 800 engine tests or shall not combust more than 175,000 gallons of fuel in jet test cell – JET7099-02 in any 12-consecutive month period.

c. The Permittee shall not combust any fuel other than JP-5, JP-8, or Jet A in the permitted jet engine test cells.

30. Abrasive Blasting Operations

a. The Permittee shall not use more than 13,200 lbs in any 12-consecutive month period of blasting media in the enclosed drive-in blasting booth.

b. The Permittee (or contractor) shall not use more than 13,200 lbs in any 12-consecutive month period of blasting media in non-enclosed or field abrasive blasting operations.

c. The Permittee shall not cause, suffer, allow or permit the use of any abrasive blasting agent other than sand, glass bead, plastic bead, coconut shells, or walnut shells without first following the applicable facility change provisions in conditions 25 through 27 of Section 2.

d. Emissions from a sandblasting or other abrasive blasting operation shall be effectively controlled by applying water to suppress visible emissions (wet blasting), enclosing the operation, or use of other equivalently effective controls.

31. Enclosed Surface Coating Operations (includes Solvent Washing and/or Cleaning)

For the purpose of these provisions a VOC containing paint, surface coating, adhesive, or solvent shall be considered to contain VOC if it contains more than 2%, by weight VOC. The term “surface coatings” in this subsection shall include paints, adhesives, and wash and/or cleaning solvents.

a. The Permittee shall not emit more than 75 tons of VOC from the use of surface coatings in enclosed surface coating operations covered by this permit in any 12-month consecutive period without first submitting a permit revision in accordance with condition 25.

b. The Permittee shall not conduct any spray coating or spray paint operations without minimizing organic solvent emissions. Such operations, other than architectural coating and spot painting, shall be conducted in an enclosed area equipped with controls containing no less than ninety-six percent of the overspray.
c. All VOC emissions from solvent washings of painting equipment shall be directed into containers that prevent evaporation into the atmosphere. [PCC 17.16.400.A, PCC 17.16.400.C.1 & 7]

32. Architectural Coatings

The Permittee (or contractor) shall not employ, evaporate or dry any architectural coating containing photochemically reactive solvents (PRS) for industrial or commercial purposes, or thin or dilute any architectural coating with a PRS. A PRS shall be any solvent with an aggregate of more than 20% of its total volume composed of the chemical compounds as classified below, or which exceeds any of the percentage composition limitations as stated below. Whenever any organic solvent or any constituent of an organic solvent may be classified from its chemical structure into more than one of the groups of organic compounds described below, it shall be considered to be a member of the group having the least allowable percent of the total volume of solvents:

i. A combination of the following types of compounds having an olefinic or cyclo-olefinic type of unsaturation-hydrocarbons, alcohols, aldehydes, esters, ethers, or ketones: 5%

ii. A combination of aromatic compounds with eight or more carbon atoms to the molecule, except ethylbenzene: 8%.

iii. A combination of ethylbenzene, ketones having branched hydrocarbon structures, trichloroethylene or toluene: 20%.

33. Solvent Degreasing Operations

a. Solvent Degreasing/Cleaning units shall be equipped with lids which shall be closed when not in use.

b. The Permittee is prohibited from using halogenated solvents in solvent degreasing/cleaning operations, in a total concentration that is greater than 5 percent by weight HAP, unless a permit revision is submitted as provided in conditions 25 through 27 of Section 2. [PCC 17.12.190 & PCC 17.12.350.A.3.a, NESHAP Subpart T Applicability; Federally Enforceable & Material Permit Conditions]

Compliance Determination [PCC 17.12.185.A.3, 4 & 5]

34. Aircraft Engine Testing Operations (Test Cells)

The Permittee shall keep and maintain an operation log for each jet engine test cell and document the following information within 30 days of the end of each month:

a. Type of fuel combusted;

b. Quantity of fuel combusted (in gallons) in the previous month; and the previous 12-consecutive month period; and

c. The number of engines tested by engine type in the previous month and the previous 12-consecutive month period.
35. **Abrasive Blasting Operations**

a. The Permittee shall maintain a log of the quantity, in pounds, of blasting agent purchased for use in the enclosed drive-in blasting booth listed in Table 2 of Attachment 2.

b. When conducting non-enclosed or field abrasive blasting operations, the Permittee (or contractor) shall maintain daily logs of the following information for each day of operation. If no operations occur, no recordkeeping shall be required:
   
i. The location of the activity and controls used (if any); and
   
ii. The abrasive blasting agent used; and
   
iii. The quantity (in pounds) of blasting-agent consumed.

c. The Permittee shall total the amount, in pounds, of abrasive blasting agents used in the previous 12-consecutive month period for enclosed and non-enclosed abrasive blasting operations as provided in conditions 35.a and 35.b above and document the information within 30 days of the end of the month in a monthly operation log.

36. **Enclosed Surface Coating Operations (includes Solvent Cleaning)**

a. The Permittee shall maintain a 12-consecutive month total of the amount of surface coatings and solvents (diluents, wash, and cleaning solvents) used, in gallons, for each surface coating operation listed in Attachment 2. In addition, for each enclosed surface coating operation that uses more than 1667 gallons of surface coatings (or 2500 gallons of surface coatings, and solvents (diluents, and wash/cleaning solvents combined), the Permittee shall maintain the following additional information:
   
i. An indexed list that identifies each specific coating, diluent, or wash/cleaning solvent used, its VOC content (in lb/gal), and density (in lb/gal). Each component in the indexed list shall correspond to a separate file containing the following information:
      
      (A) The indexed ID, the product name and identification number; and
      
      (B) The applicable MSDS, technical data sheet, test result, or manufacturer’s certification; and
      
      (C) The VOC content (in weight percent) as required by condition 40.a, and density or specific gravity (in lbs/gal).
   
   ii. A log for each enclosed surface coating operation of the following information recorded on a monthly basis to demonstrate compliance with condition 31.a. For the purpose of this condition, used coating components, diluents, and wash or cleaning solvents shall be considered to be emitted. The Permittee may use data as entered and maintained in the Air Program Management System (APIMS) to inventory and calculate the monthly and 12-consecutive month VOC emission rate. The Permittee may also identify in the log, any non-VOC containing coatings and solvents to be excluded from the totals in accordance with PCC 17.04.340.A.250.
      
      (A) The indexed identification of the specific surface coating, diluent, and wash or cleaning solvent used as listed in the index required by condition 36.a.i; and
      
      (B) The volume (less water and exempt solvents) of each coating component used (in gal);
      
      (C) The volume (less water and exempt solvents) of each diluent component used (in gal);
      
      (D) The volume (less water and exempt solvents) of each wash and cleaning solvent used (in gal);
      
      (E) The calculated monthly VOC emission rate, (in tons of VOC emitted/month);
      
      [see Appendix 6 for formulas to calculate and determine the VOC emission rate];
      
      (F) The 12-consecutive month VOC emission rate (in tons of VOC emitted/year);
b. Enclosed surface coating operations that use less than 1667 gallons of surface coatings, or 2500 gallons of surface coatings, and solvents (diluents, and wash/cleaning solvents) combined, may use a default emission rate of 8.0 lbs of VOC emitted per total gallons of surface coatings and solvents used.

c. The Permittee shall maintain documentation demonstrating that enclosed surface coating operations meet the overspray control requirements in condition 31.b by using filters that have a minimum arrestance rating to contain at least 96% of the overspray, or an equivalent system which can be shown to meet the over-spray control requirement, and that the enclosure and controls are operated and maintained consistent with manufacturer’s guidelines or good engineering practice.

37. Architectural Coatings

For the purpose of this provision, architectural coating means coating used commercially or industrially for residential, commercial, or industrial buildings and their appurtenances; structural steel; and other fabrications such as storage tanks, bridges, beams, and girders.

a. The Permittee shall keep a monthly log of the total amount of architectural coatings used in gallons and calculate and record the 12-consecutive month total in gallons. The Permittee shall maintain MSDS sheets and manufacturers certifications, as necessary, to demonstrate compliance with thePRS limitations in condition 32.

38. Solvent Degreasing Operations

The Permittee shall maintain a list of solvents used in solvent degreasing operations and their MSDS sheets.

39. Miscellaneous Chemical/Materials Use

For the purpose of these conditions a HAP-containing chemical/material shall be any material that contains any individual HAP that is an Occupational Safety and Health Administration (OSHA)-defined carcinogen as specified in 29 CFR 1910.1200(d)(4) at a concentration greater than 0.1 percent by mass, or greater than 1.0 percent by mass for any other individual HAP compound. For the purpose of determining whether materials the Permittee uses contain HAP compounds, the Permittee may rely on formulation data provided by the manufacturer or supplier, such as the material safety data sheet (MSDS), as long as it represents each HAP compound in the material that is present at 0.1 percent by mass or more for OSHA defined carcinogens as specified in 29 CFR 1910.1200(d)(4) and at 1.0 percent by mass or more for other target HAP compounds. If the HAP content for a material is specified as a range of concentrations in the MSDS, the highest concentration specified in the range shall be used to determine the HAP content of that material.

a. In accordance with condition 6, the Permittee shall maintain an Air Program Information Management System (APIMS) to ensure tracking and reporting of the types and quantities of HAP-containing materials issued or used in operations covered by this permit (SIC Code, Major Group 42). The HAP containing materials shall include but not be limited to surface coatings and diluents, wash solvents, degreasing agents, de-icing agents, light lubricants, adhesives, sealants, aircraft and other-non-janitorial soaps and cleaners.

b. The Permittee shall use APIMS to prepare a monthly issues report (MIR) that inventories and totals the mass of HAP emitted from HAP-containing materials issued or used in operations covered by this permit. The following shall be assumed required in generating the MIR report:

i. The MIR shall contain the monthly use or issuance of each material including the unit basis used in determining the monthly summaries of the combined mass of HAPs emitted and the monthly summaries of individual HAP species emitted.
ii. The Permittee may choose to track HAP emissions on an “issues” basis or on an “as used” basis. The MIR shall clearly state if the log is an “as used” or an “issue” log, and identify the material with the associated operation, whenever possible, as either surface coating operations, solvent degreasing operations, or miscellaneous chemical/materials, as applicable. If the associated operation is otherwise unknown, the HAP emissions shall be included in the miscellaneous chemical/materials operation log.

iii. In operations where the Permittee chooses to track HAP emissions on an “issues” basis rather than an “as used” basis, an “issue” shall be deemed to have occurred when possession of a material which has been purchased for use at the facility is transferred to the requestor. The Permittee shall not be allowed to change the method of logging once established. That is, an “issue log” shall not be allowed to be changed to an “as used” type of log, or vice versa, once the log has been implemented for a particular operation.

iv. All products shall be assumed to be used during the calendar month they are issued or used for enclosed surface coating operations, solvent degreasing operations, and miscellaneous chemical/materials issues (including architectural coatings).

v. All products issued or used shall be assumed to emit all of its volatile HAP when used.

vi. Spray applied architectural coatings issued or used shall be assumed to emit all of their non-volatile HAP.

vii. Every material or product that is used or issued shall be analyzed for its HAP content and recorded in a file that is readily available for expeditious review by the Control Officer. Each record shall be indexed to the materials listed in the MIR and contain the following information:

(a) The HAP content (in weight percent) for each individual HAP specie; and

(b) The total combined HAPs content (in weight percent); and

(c) The unit basis, weight or volume, and density or specific gravity (as applicable).

Testing Requirements

40. In addition to the permit-wide testing requirements in condition 28, the Permittee shall use the following provisions to comply with the testing or analysis requirements in this Section:

a. VOC Content

The VOC content (percent by weight) of surface coatings in applicable enclosed surface coating operations shall be determined through one of the following methods:

i. Use of Material Safety Data Sheets (MSDS) or Technical Data Sheet supplied by the manufacturer. If the VOC content is expressed as a range the highest amount shall be used;

ii. A manufacturer’s certification of the VOC content;

iii. ASTM 2369 – “Standard Test Method for Volatile Content of Coatings” or an equivalent;

iv. The methods set forth in 40 CFR Part 60, Appendix A; and

v. If otherwise unable to determine the VOC content for a coating that is not commonly used or in a list as required by condition 36.c, the Permittee shall use a “default” coating VOC content of 7 lbs.
of VOC/gallon, with a density of 10 lb/gallon (or 70% by weight); and a “default” solvent VOC content of 10 lbs. of VOC/gallon, with a density of 10 lb/gallon (or 100% by weight).

b. **HAP Content**

The HAP content (percent by weight) of all materials issued or used shall be determined through one of the following methods:

i. **Use of Material Safety Data Sheets (MSDS).** If the HAP content for a material is specified as a range of concentrations in the MSDS, the highest concentration specified in the range shall be used to determine the HAP content of the material.

ii. A manufacturer’s certification of HAP content.

iii. The methods set forth in 40 CFR Part 60, Appendix A.

iv. A standard analytical methodology published by ASTM or EPA.

v. If otherwise unknown or unable to determine the HAP content or coating density for surface coatings that are not commonly used, the Permittee may use a “default” surface coating HAP content of 7 lbs. of HAP/gallon or 70% HAP (by weight); and a solvent HAP content of 10 lbs. of HAP/gallon or 100% HAP (by weight) added to the highest single HAP specie emitted from emission sources and operations as provided in condition 21.c.
SECTION 4: FOSSIL FUEL FIRED INDUSTRIAL AND COMMERCIAL EQUIPMENT

In accordance with condition 63.c, the provisions in this Section are applicable to boilers, heaters, and other fuel fired equipment identified on the equipment list in Table 6 of Attachment 2. In addition to the following provisions, the general provisions of 40 CFR Part 60 and 63, Subpart A apply to affected steam generating units (boilers) as applicable. All provisions of this section are locally enforceable unless otherwise noted.

Emission Limitations and Standards

41. Operating Limitation

The Permittee shall burn only the following fuels in each boiler, heater, or other fuel fired equipment listed in Table 6 of Attachment 2, subject to the following limitations:

a. Natural Gas

There are no operating hours or fuel limitations for equipment when burning natural gas. For the purpose of this provision, Natural gas means: A naturally occurring mixture of hydrocarbon and non-hydrocarbon gases found in geologic formations beneath the earth's surface, of which the principal constituent is methane; or liquefied petroleum gas, as defined by the American Society for Testing and Materials in ASTM D1835; or a mixture of hydrocarbons that maintains a gaseous state at ISO conditions (i.e., a temperature of 288 Kelvin, a relative humidity of 60 percent, and a pressure of 101.3 kilopascals), additionally, natural gas must either be composed of at least 70 percent methane by volume or have a gross calorific value between 34 and 43 megajoules (MJ) per dry standard cubic meter (950 and 1,150 Btu per dry standard cubic foot); or propane or propane-derived synthetic natural gas.

Propane means a colorless gas derived from petroleum and natural gas, with the molecular structure C3H8. [40 CFR 63.11237]

42. Opacity Limit

The opacity of all plumes and effluents from equipment listed in Table 6 of Attachment 2 shall not exceed 20% as determined by EPA Reference Method 9, Appendix A, 40 CFR Part 60.

Compliance Determination

43. Operating Limitation

When using natural gas fuel, the Permittee may demonstrate that only commercially available pipeline quality natural gas fuel was fired by making available to the Control Officer for inspection, documentation, such as invoices or statements from the fuel supplier, showing that commercial natural gas was purchased for use in the equipment. Alternatively, the demonstration may be made by actual inspection of the equipment showing that pipeline natural gas is plumbed to the equipment for firing.

44. Opacity Limit

A demonstration to show compliance with the emission limitation for opacity in condition 42 shall not be required since the percent of opacity of visible emissions from the boilers while combusting natural gas fuel is inherently low. The Permittee shall operate and maintain the boilers at all times - including periods of startup, shutdown, and malfunction - in a manner consistent with good air pollution control practices and consistent with manufacturer’s guidelines.
SECTION 5: STATIONARY ROTATING MACHINERY

In accordance with condition 63.d, the provisions in this Section apply to the stationary rotating machinery listed in Table 7 of Attachment 2. All provisions of this Section are locally enforceable unless otherwise noted.

Emission Limitations And Standards

45. Operational Limitations

The Permittee shall not operate emergency RICE for more than the number of hours per year allowed in Table 7 of Attachment 2 in any 12-consecutive month period. There is no limit on hours of operation during true emergencies.

46. Fuel Limitations

The Permittee shall burn only the specified fuel(s) allowed for each unit in Table 7 of Attachment 2. The Permittee shall only fire fuel with Sulfur content less than 0.90% Sulfur by weight.

47. Opacity Limit

Stationary Rotating Machinery shall comply with the permit-wide opacity limit in condition 10. In addition, the Permittee shall not cause or permit to be emitted into the atmosphere from any rotating stationary rotating machinery (generators) smoke for any period greater than ten consecutive seconds which exceeds 40 percent opacity. Visible emissions when starting cold equipment shall be exempt from this requirement for the first ten minutes.

Compliance Determination

48. Operational Limitation

a. For each generator identified as having an hour limitation in Table 7 of Attachment 2, the Permittee shall record the monthly operating hours and recalculate a rolling twelve (12) month total within 30 calendar days of the end of the month.

49. Fuel Limitation

In order to demonstrate compliance with the fuel limitations required in condition 46, the Permittee shall maintain records of fuel supplier specifications which verify the sulfur content of the fuels, piped and/or as delivered.

50. Opacity Limit

The Permittee shall conduct a visible emissions check on the exhaust stack of stationary rotating machinery at least monthly if run during the month. For the purposes of this Section, a visible emission check is verification that abnormal emissions are not present at the generator stack. The Permittee shall record the date and time of the check, the name of the person conducting the check, the results of the check, and the type of corrective action taken (if required). No monthly visible emissions checks are required for stationary rotating machinery that only fire natural gas or LPG (Propane).
SECTION 6: FUEL STORAGE AND DISPENSING FACILITIES

In accordance with condition 63.e, the provisions in this Section apply to storage tanks and fuel dispensing facilities listed in Table 8 of Attachment 2. All provisions of this Section are Federally Enforceable unless otherwise noted.

Emission Limitations And Standards

51. Operational Limitations

a. The Permittee shall only store the following fuels in applicable storage tanks and their associated dispensing equipment:

   i. Motor vehicle gasoline; and
   
   ii. Gas turbine fuels numbers Jet-A, JP-5 and JP-8; and
   
   iii. Diesel/Bio-Diesel fuel oil numbers 2-D and 4-D.

b. The Permittee shall not allow the combined throughput of all fuel products covered by this permit to exceed the following totals for each type of fuel in any 12-consecutive month period.

   i. Gasoline fuel throughput shall not exceed 160,000 gallons; and
   
   ii. Gas turbine fuels throughput shall not exceed 2,000,000 gallons combined.
   
   iii. Diesel fuel throughput shall not exceed 200,000 gallons; and

c. The Permittee must minimize emissions of hydrocarbons from a stationary tank, reservoir, or other container which has a capacity of at least 250 gallons but less than or equal to 40,000 gallons used for storing petroleum liquids by applying and maintaining the following controls:

   i. Submerged fill pipe, or
   
   ii. Refrigeration-type vapor recovery system or an equivalently effective control system.

d. The Permittee shall equip all pumps and compressors which handle volatile organic compounds with mechanical seals or the equivalent.

   [Material Permit Condition]

   [PCC 17.16.230.D]  
   [Locally Enforceable Condition]

   [A.R.S. §41-2132.A and B]  
   [Material Permit Condition]
52. **NESHAP for Gasoline Dispensing Facilities ‘GDF’**

In accordance with condition 63.e.ii, the provisions in this subsection apply to each GDF listed in Table 8 of Attachment 2. The General Provisions of 40 CFR Part 63, Subpart A apply to applicable GDF sources as indicated in Table 8 of 40 CFR Part 63, Subpart CCCCCC.

a. The Permittee shall not cause, allow or permit the combined **yearly** throughput of gasoline for affected GDF facilities listed in Table 8 to exceed 160,000 gallons. [PCC 17.12.190.B] **[Material Permit Condition]**

b. For each permitted GDF: If a GDF ever exceeds an applicable throughput threshold, as listed below, the GDF remains subject to all requirements for sources above the threshold even if the affected source throughput later falls below the applicable throughput thresholds. [40 CFR 63.11111(i)]

c. Requirements for GDF with monthly throughput less than 10,000 gallons of gasoline:

   i. The Permittee shall not allow gasoline to be handled in a manner that would result in vapor releases to the atmosphere for extended periods of time. Measures to be taken include, but are not limited to, the following: [40 CFR 63.11116(a)] **[Material Permit Conditions]**

      (a) Minimize gasoline spills;
      (b) Clean up spills as expeditiously as practicable;
      (c) Cover all open gasoline containers and all gasoline storage tank fill-pipes with a gasketed seal when not in use.
      (d) Minimize gasoline sent to open waste collection systems that collect and transport gasoline to reclamation and recycling devices, such as oil/water separators.

   ii. The Permittee is not required to submit notifications or reports as specified in 40 CFR 63.11125, 63.11126, or subpart A but you must have records available within 24 hours of a request by the Control Officer to document your gasoline throughput. [40 CFR 63.11116(b)]

   iii. Portable gasoline tanks, filled from a fixed storage tank at a GDF and used to dispense into on-site motor vehicles or other gasoline-fueled engines within the area source, are subject to 52.c.i.(c) of this Section. [40 CFR 63.11111(j)] **[Material Permit Condition]**

d. **Requirements for facilities with monthly throughput of 10,000 gallons of gasoline or more:**

   i. The Permittee must comply with the requirements in condition 48.c. [40 CFR 11117(a)]

   ii. The Permittee shall use submerged filling when loading gasoline into storage tanks with greater than 249 gallon capacity. [40 CFR 63.11117(b) & (c)] **[Material Permit Conditions]**

      (a) Submerged fill pipes installed on or before November 9, 2006, must be no more than 12 inches from the bottom of the tank.

      (b) Submerged fill pipes installed after November 9, 2006, must be no more than 6 inches from the bottom of the tank;
(c). Submerged fill pipes not meeting these specifications are allowed if the Permittee can demonstrate that the liquid level in the tank is always above the entire opening of the fill pipe.

iii. The Permittee must have records available within 24 hours of a request by the Control Officer to document the gasoline throughput.

e. [Reserved for GDF facilities with monthly throughput of 100,000 gallons of gasoline or more]

f. [Reserved for Cargo tanks unloading at a GDF /w monthly throughput of 100,000 gallons or more]

**Compliance Determination**

[Material Permit Condition] [PCC 17.12.185.A.3, 4, & 5]

53. **Operational Limitations**

a. The Permittee shall keep and maintain an operation log for each fuel storage tank and associated dispensing facilities listed in Table 8 of Attachment 2. If no fuel was loaded into a particular tank during a given month, the log shall note that no fuel was received. The Permittee shall record the following information for each storage tank within 30 days of the end of the previous month:

i. The quantity of fuel loaded, in gallons, with each addition (load) and the date of each addition.

ii. The monthly total of fuel loaded, in gallons.

iii. The 12-consecutive month totals of fuel loaded, in gallons.

b. The Permittee shall keep and maintain an operation log for each fuel type listed in condition 51.a.i through iii loaded into all storage tanks and associated dispensing facilities listed in Table 8 of Attachment 2. The Permittee shall record the following information for each fuel type within 30 days of the end of the previous month:

i. Tank or Dispensing Facility ID and monthly total, in gallons, of fuels loaded as required in condition 51.

ii. The monthly total, in gallons, of fuel loaded into all tanks during the previous month.

iii. The 12-consecutive month total, in gallons, loaded into all tanks.

54. **GDF Requirements**

a. The Permittee must, at all times, including periods of startup, shutdown, and malfunction, operate and maintain the GDF, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions.

[40 CFR 63.6(e)(1)(i), & 40 CFR 63, Subpart CCCCCC, Table 3]

b. An affected source shall provide proof of throughput upon request by the Control Officer.

[40 CFR 63.111111(e)]

c. **Yearly** throughput shall be a 365-day rolling total, calculated by summing the volume of gasoline loaded into, or dispensed from, all gasoline storage tanks at each GDF during the current day, plus the total volume of gasoline loaded into, or dispensed from, all gasoline storage tanks at each GDF during the previous 364 days. **Monthly** throughput shall be calculated using the yearly throughput and dividing that sum by 12.

[40 CFR 63.11132] [Material Permit Condition]
Section 6 – Fuel Storage and Dispensing Facilities

55. **Air Pollution Control**

a. The Permittee shall annually inspect the gasoline storage tanks’ submerged fill devices. The inspections shall be used to determine whether all of the submerged fill devices are in good working order, according to good modern practices and any available industry practices or recommendations. [PCC 17.12.185.A.3.c]

   [Material Permit Condition]

b. The Permittee shall inspect the vapor control recovery system(s), all pumps compressors, pipes, hoses mechanical seals or other equipment storing, handling, conveying or controlling VOCs and HAPs according to the inspection schedule: [PCC 17.12.185.A.3.c]

   [Material Permit Condition]

   i. On a weekly basis check for leaks on suction and discharge piping, seals, packing glands, and any other joint; and Tighten or replace loose, missing damaged nuts, bolts, or screws as identified by visual inspection.

   ii. On a monthly basis, the Permittee shall check pump operation for vibration, noise, overheating, and any other irregularity.

   iii. On a quarterly basis, the Permittee shall Pressure test system for leaks; clean dispensing system equipment; and check hoses and nozzles for condition.

   iv. On a semi-annual basis, the Permittee shall clean and repair tank vents; and Check drop tube seal, spring, and operability.

   v. On an annual basis, the Permittee shall check leak detector pressure relief setting; and check leak detector operation.

c. The records of the inspections required in conditions 55.a and 55.b above shall contain at least the following information:

   i. Associated Tank(s), Facility ID, and identification of the device or equipment;

   ii. The date of the inspection;

   iii. The results of the inspection; and

   iv. Any corrective action taken.

d. The Permittee shall repair defective air pollution control equipment promptly and keep complete records of the maintenance and repairs performed.
SECTION 7: EMISSIONS FROM EXISTING AND NEW NONPOINT SOURCES

In accordance with condition 63.f, the provisions in this Section apply to all nonpoint sources of particulate matter and fugitive dust, including equipment and activities employed during land clearing, leveling, grading or trenching conducted at the AMARG facility.

Emission Limitations and Standards

56. **Motor Vehicle Operations**

The Permittee shall not cause, suffer, allow, or permit a vacant lot, or an urban or suburban open area, to be driven over or used by motor vehicles, trucks, cars, cycles, bikes, or buggies, or by animals such as horses, without taking reasonable precautions to limit excessive amounts of particulates from becoming airborne. Dust shall be kept to a minimum by using an approved dust suppressant, or adhesive soil stabilizer, or by paving, or by barring access to the property, or by other acceptable means.

57. **Vacant Lots and Open Spaces**

a. The Permittee shall not use or leave a vacant lot, housing plot, building site, parking area, sales lot, playground, livestock feedlot, or other open area - other than those used solely for soil-cultivation or vegetative crop-producing and harvesting agricultural purposes in such a state, after construction, alteration, clearing, leveling, or excavation that naturally induced wind blowing over the area causes a violation of conditions 10 and 11 of this permit. Dust emissions must be permanently suppressed by landscaping, covering with gravel or vegetation, paving, or applying equivalently effective controls.

b. The Permittee shall not allow a vacant lot, parking area, sales lot, or other open urban area to be used by motor vehicles in such a manner that visible dust emissions induced by vehicular traffic on the area cause a violation of conditions 10 and 11 of this permit.

58. **Roads and Streets**

a. The Permittee shall not cause, suffer, allow or permit the use, repair, construction or reconstruction of a roadway or alley without taking reasonable precautions to prevent excessive amounts of particulate matter from becoming airborne. Dust and other particulates shall be kept to a minimum by employing temporary paving, dust suppressants, wetting down, detouring or by other reasonable means.

b. The Permittee shall not construct a new unpaved service road or unpaved haul road unless dust will be suppressed after construction by intermittently watering, limiting access, or applying chemical dust suppressants to the road, in such a way that visible dust emissions caused by vehicular traffic on the road do not violate conditions 10 and 11 of this permit.

c. The Permittee shall not cause, suffer, allow or permit transportation of materials likely to give rise to airborne dust without taking reasonable precautions, such as wetting, applying dust suppressants, or covering the load, to prevent particulate matter from becoming airborne. Earth or other material that is deposited by trucking or earth moving equipment shall be removed from paved streets by the person responsible for such deposits.

d. The surfacing of roadways with asbestos tailings is prohibited.
59. **Particulate Materials** [PCC 17.16.100]

a. The Permittee shall not cause, suffer, allow or permit crushing, screening, handling, transporting or conveying of materials or other operations likely to result in significant amounts of airborne dust without taking reasonable precautions, such as the use of spray bars, wetting agents, dust suppressants, covering the load, and hoods to prevent excessive amounts of particulate matter from becoming airborne.

b. Dust emissions from the transportation of materials shall be effectively controlled by covering stock loads in open-bodied trucks, limiting vehicular speeds, or other equivalently effective controls.

60. **Storage Piles** [PCC 17.16.110]

a. The Permittee shall not cause, suffer, allow, or permit organic or inorganic dust producing material to be stacked, piled or otherwise stored without taking reasonable precautions such as chemical stabilization, wetting, or covering to prevent excessive amounts of particulate matter from becoming airborne.

b. Stacking and reclaiming machinery utilized at storage piles shall be operated at all times with a minimum fall of material and in such manner, or with the use of spray bars and wetting agents, as to minimize and control to ensure compliance with conditions 10 and 11 of this permit.

61. **Roadway and Site Cleaning Machinery** [PCC 17.16.470]

a. The Permittee shall not cause, allow or permit to be emitted into the atmosphere from any roadway and site cleaning machinery smoke or dust for any period greater than 10 consecutive seconds, the opacity of which exceeds forty percent. Visible emissions when starting cold equipment shall be exempt from this requirement for the first 10 minutes.

b. In addition to complying with condition 61.a above, the Permittee shall not cause, allow or permit the cleaning of any site, roadway, or alley without taking reasonable precautions to prevent particulate matter from becoming airborne. Reasonable precautions may include applying dust suppressants. Earth or other material shall be removed from paved streets onto which earth or other material has been transported by trucking, earthmoving equipment, erosion by water, or by other means.
Compliance Determination

62. Nonpoint Source Emissions

a. The Permittee shall maintain a monthly fugitive dust activity log and record the following:

i. Dates on which land clearing, leveling, grading, trenching, or earthmoving take place and the type of control measure(s) employed.

ii. Dates on which dirt is transported, the control measure(s) employed and the name of person making the record.

iii. During land clearing, leveling, grading, trenching, or earthmoving activities, the Permittee shall inspect the projects to ensure that there is no excessive dust produced. If excessive dust is observed, the Permittee shall record the date, the name of the person conducting the inspection and the corrective action taken to reduce the dust to below the 20% opacity levels.

b. In accordance with condition 15, Permittee shall document any investigation or corrective action taken to comply with the reasonable precautions and standards in this Section.

c. The Permittee shall maintain records of any discussions with PDEQ regarding the need for additional reasonably necessary and feasible precautions for dust control, and a list summarizing any agreed upon additional dust control requirements.
SECTION 8: SPECIFIC APPLICABILITY PROVISIONS

63. Permitted Facility Sources

The Specific Conditions in this permit apply to the following source categories, affected facilities, equipment, emission sources, installations, activities and operations at the facility.

a. Permit-Wide Operations

Except as provided in condition 65, the provisions in Section 2 of this permit apply to permit-wide operations and to all sources of air contaminants at the facility, to include the following: Voluntary emission limitations, general control standards, materials handling standards, odor limiting standard, opacity limit, visibility limiting standard, authorization to conduct fugitive dust producing activities, disposition of portable sources, and asbestos requirements for renovation and demolition activities. In addition to the General Conditions contained in this permit, Section 2 contains specific monitoring, recordkeeping, reporting, facility change, and testing requirements that apply permit-wide and to all emission sources and operations covered by this permit.

[Federally and Locally Enforceable Conditions]

b. Special Warehousing Operations

Section 3 of this permit applies to the following activities and operations at the facility: aircraft engine testing operations, abrasive blasting operations, enclosed surface coating operations, solvent degreasing operations, and HAP containing miscellaneous chemical/materials issues.

[Federally and Locally Enforceable Conditions]

i. Operating limitations

[a] Equipment and operations identified in Table’s 1, through 5 of Attachment 2 are synthetic minor sources of HAP based on the throughput criteria in Section 3 and the emission factors and estimates in the approved potential to emit documents.

[b] Applicable enclosed surface coating operations identified in Table 3 of Attachment 2 are synthetic minor sources of VOC based on voluntary emission limitations in condition 31.a and the emission factors and estimates in the approved potential to emit documents.

c. Fossil-Fuel Fired Industrial and Commercial Equipment (Boilers and Heaters)

Section 4 of this permit applies to fossil-fuel fired industrial and commercial installations which are less than seventy-three megawatts capacity (two hundred fifty million British thermal units per hour); but in the aggregate on any premises are rated at greater than five hundred thousand British thermal units per hour (0.146 megawatts); and in which fuel is burned for the primary purpose of producing steam, hot water, hot air or other liquids, gases or solids and in the course of doing so the products of combustion do not come into direct contact with process materials.

[Federally and Locally Enforceable Conditions]

i. Operating limitations

[a] Applicable boilers, heaters, or other fuel fired equipment covered by this permit and identified in Table 6 of Attachment 2 that comply with Section 3 of this permit shall be considered to be compliant with the applicable requirements in PCC 17.16.165.
Section 8 – Specific Applicability Provisions

(b) Should the Permittee desire to fire fuels in a boiler or hot water heater covered by this permit that do not meet the fuel limitations in Section 3 of this permit, the Permittee shall submit a significant revision in accordance with condition 25.

[40 CFR 60.43(e)(1), 40 CFR 63.1194(d), 40 CFR 63.11201(a), & Table 2, to NESHAP Subpart JJJJJJ]

d. Stationary Rotating Machinery

Section 5 of this permit applies to stationary rotating machinery that are not subject to the NSPS standards in 40 CFR Part 60, Subpart IIII or NESHAP standards in 40 CFR Part 63, Subpart ZZZZ.

[Locally Enforceable & Material Permit Conditions]

i. Operating limitations

(a) Applicable emergency RICE in Table 7 are exempt from NESHAP Subpart ZZZZ provided they are operated only for maintenance and readiness testing and nonemergency use in accordance with 40 CFR 63.6640(f).

[40 CFR 63.6640(f)]

e. Fuel Storage and Fuel Dispensing

Section 6 of the permit applies to fuel storage, loading, and dispensing facilities listed in Table 8. The provisions in this section apply to fuel loading into the applicable storage tanks, fuel dispensing into government owned vehicles, all stationary gasoline storage tanks with a capacity of at least 250 gallons and less than 40,000 gallons capacity, and pumps and compressors which handle volatile organic compounds.

[i. Operating limitations]

Equipment and operations identified in Table 8 of Attachment 2 are synthetic minor sources of HAP based on the throughput criteria in Section 5 and the emission factors and estimates in the approved potential to emit documents provided with the permit application.

[ii. NESHAP for Gasoline Dispensing Facilities ‘GDF’]

The emission sources to which this subsection applies are gasoline storage tanks and associated equipment components in vapor or liquid gasoline service at new, reconstructed, or existing GDF that meet the criteria as stated below. Pressure/Vacuum vents on gasoline storage tanks and the equipment necessary to unload product from cargo tanks into the storage tanks at GDF are covered emission sources. The equipment used for the refueling of motor vehicles is not covered by this subsection. An affected source is a new affected source if you commenced construction on the affected source after November 9, 2006, and you meet the applicability criteria stated below at the time you commenced operation. An affected source is reconstructed if you meet the criteria for reconstruction as defined in 40 CFR 63.2. An affected source is an existing affected source if it is not new or reconstructed. GDF must comply with the provisions of this subsection by the dates specified in 40 CFR 60.11113.

[40 CFR 63.11112 & 40 CFR 63.11113]

(b) Applicable to each GDF that is located at an area source. The affected source includes each gasoline cargo tank during the delivery of product to a GDF and includes each storage tank.

[40 CFR 63.11111(a)]
Section 8 – Specific Applicability Provisions

(c) If your GDF has a monthly throughput of less than 10,000 gallons of gasoline, you must comply with the requirements in condition 52.c of this permit.  

(d) If your GDF has a monthly throughput of 10,000 gallons of gasoline or more, you must comply with the requirements in condition 52.d of this permit.

(e) An affected source shall, upon request by the Control Officer, demonstrate that their monthly throughput is less than the 10,000-gallon or the 100,000-gallon threshold level, as applicable. For new or reconstructed affected sources, as specified in condition 63.e.ii.(a) of this subsection, recordkeeping to document monthly throughput must begin upon startup of the affected source. For existing sources, as specified in condition 63.e.ii(a) recordkeeping to document monthly throughput must begin on January 10, 2008. For existing sources that are subject to this subpart only because they load gasoline into fuel tanks other than those in motor vehicles, as defined in 40 CFR 63.11132, recordkeeping to document monthly throughput must begin on January 24, 2011. Records required under this paragraph shall be kept for a period of 5 years.

(f) The loading of aviation gasoline into storage tanks at airports, and the subsequent transfer of aviation gasoline within the airport, is not subject to this subpart.

(g) Monthly throughput is the total volume of gasoline loaded into, or dispensed from, all the gasoline storage tanks located at a single affected GDF. If an area source has two or more GDF at separate locations within the area source, each GDF is treated as a separate affected source.

(i) If the Permittee’s affected source's throughput ever exceeds an applicable throughput threshold, the affected source will remain subject to the requirements for sources above the threshold, even if the affected source throughput later falls below the applicable throughput threshold.

(j) The dispensing of gasoline from a fixed gasoline storage tank at a GDF into a portable gasoline tank for the on-site delivery and subsequent dispensing of the gasoline into the fuel tank of a motor vehicle or other gasoline-fueled engine or equipment used within the area source is only subject to condition 52.d.

f. Emissions from New and Existing Nonpoint Sources

Section 7 of this permit contains standards including reasonable precautions that apply to sources of fugitive dust or particulate matter which due to a lack of an identifiable emission point or plume are classified as nonpoint sources. These sources include but are not limited to equipment and activities employed during land clearing leveling, grading or trenching; motor vehicle operation on vacant lots and open areas; roads and streets; particulate material handling operations; and dust producing material storage piles.

64. Local (New and Existing) Stationary Source Performance Standards

Local performance standards apply to the following facilities or operations: surface coating operations, solvent degreasing/cleaning operations, and other operations engaged in the employment of organic solvents; fossil fuel fired industrial and commercial equipment; each stationary internal combustion engine; petroleum liquid storage tanks of at least 250 gallons and each pump or compressor which handles VOC; and each unclassified source.

[Locally Enforceable Conditions]
65. *Exempt Sources*

a. **Agricultural Equipment**

   The Specific Conditions contained in this air quality permit shall not apply to agricultural equipment used in normal farm operations, unless their operation without a permit would result in a violation of the Act.  

   [PCC 17.12.140.C.3]
GENERAL CONDITIONS

[References are to Title 17 of the Pima County Code [PCC] unless otherwise noted]

1. **Compliance with Permit Conditions** [PCC 17.12.185.A.7.a & b]
   
   a. The Permittee shall comply with all conditions of this permit including all applicable requirements of Arizona air quality statutes and the air quality rules. Any permit noncompliance constitutes a violation of the Arizona Revised Statutes and is grounds for enforcement action; for permit termination, revocation and reissuance, or revision; or for denial of a permit renewal application. In addition, noncompliance with any federally enforceable requirement constitutes a violation of the Clean Air Act.
   
   b. It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

   
   The Permittee shall report to the Control Officer any emissions in excess of the limits established by this permit. The report shall be in 2 parts as specified below:
   
   a. Notification by telephone or facsimile within 24 hours of the time the Permittee first learned of the occurrence of excess emission that includes all available information from 17.12.040.B. The number to report excess emissions is 520-724-7400. The facsimile number is 520-838-7432.
   
   b. Detailed written notification by submission of an excess emissions report within 72 hours of the notification under 2.a above. Send to PDEQ 33 N. Stone Avenue, Suite 700, Tucson, Arizona 85701.

3. **Property Rights** [PCC 17.12.185.A.7.d]
   
   The permit does not convey any property rights of any sort, or any exclusive privilege to the permit holder.

4. **Fee Payment** [PCC 17.12.185.A.9 & PCC 17.12.520]
   
   The Permittee shall pay fees to the Control Officer pursuant to PCC 17.12.520.

5. **Permit Revision, Reopening, Revocation and Reissuance, or Termination for Cause** [PCC 17.12.185.A.7.c]
   
   The permit may be revised, reopened, revoked and reissued, or terminated for cause pursuant to PCC 17.12.270. The filing of a request by the Permittee for a permit revision, revocation and reissuance, or termination; or of a notification of planned changes or anticipated noncompliance does not stay any permit condition.

   
   a. The Permittee shall furnish to the Control Officer, within a reasonable time, any information that the Control Officer may request in writing to determine whether cause exists for revising, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the Permittee shall also furnish to the Control Officer copies of records required to be kept by the permit. For information claimed to be confidential, the Permittee shall furnish a copy of such records to the Control Officer along with a claim of confidentiality.
   
   b. If the Permittee has failed to submit any relevant facts or if the Permittee has submitted incorrect information in the permit application, the Permittee shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information.

7. **Severability Clause** [PCC 17.12.185.A.6]
   
   The provisions of this permit are severable. If any provision of this permit is held invalid, the remainder of this permit shall not be affected thereby.

ATTACHMENT 6 – CALCULATION OF VOC EMISSION RATE FROM ENCLOSED SURFACE COATING OPERATION

The monthly VOC emission rate may be calculated using the following formula:

\[
\text{VOC emitted} = \sum_{i=1}^{n} V_i \cdot (VOC_M)_i = \sum_{i=1}^{n} (V_i \cdot VOC_{M1}) + (V_2 \cdot VOC_{M2}) + (V_3 \cdot VOC_{M3}) \ldots (V_n \cdot VOC_{Mn})
\]

Where:

- \(n\) = number each separate components (including solvents) used as recorded during the month.
- \(V_i\) = the volume (less water and exempt solvents), in gallons, of each component recorded and used during the month.
- \(VOC_{M}\) = the VOC content (less water and exempt solvents), in pounds per gallon, of a component or solvent as documented in the component index;
  \[
  VOC_{M} = \frac{W_o \cdot D_c}{100\% - V_w - V_{ex}}
  \]
  Where:
  - \(W_o\) = VOC content (weight percent) supplied by manufacturer or from MSDS;
  - \(D_c\) = component density supplied by manufacturer in lbs/gallon;
  - \(V_w\) = water content (volume percent) supplied by manufacturer = 0% for solvent based
  - \(V_{ex}\) = exempt solvent content (volume percent) supplied by manufacturer

For operations that utilize a mass based system, rather than a volumetric system, to measure the quantities of coating components used, the volumes \((V_i)\) in the above formula for VOC emitted may be substituted with the following:

\[
V_i = \frac{M_i}{\rho_i}
\]

Where:

- \(M_i\) = Mass of component used (in pounds);
- \(\rho_i\) = Density of component (in pounds/gallon);

Where:

- \(\rho_i\) = Specific Gravity (SG\(_i\)) * 8.33 lbs/gallon;
