

Requirements for Regulated Riparian Habitat:
Minor Boundary Modifications

Minor boundary modifications are defined as changes to the outer limits of mapped Regulated Riparian Habitat (RRH) to align with the topography, floodplain and riparian vegetation based upon field verified site conditions.

Boundary modification submittals are subject to District review and approval. The following are the general requirements for a Minor Boundary Modifications submittal:

Provide an exhibit that delineates the proposed boundary modifications. The exhibit shall include a recent aerial photograph (minimum scale 1"=200') that compares the areal extent and acreage of the mapped RRH to the proposed modified boundaries. The following information shall be shown on the exhibit:

- North arrow, scale, tax parcel number, address, owner, project number (if applicable),
- RRH boundary and classification designation as shown on the 2005 Riparian Classification Maps,
- Proposed modified riparian habitat boundary,
- Property boundary,
- Limits of proposed disturbance,
- Total acreage of the RRH from the 2005 Riparian Classification Map,
- Total acreage of the RRH within the modified riparian habitat boundary,
- Pre-disturbance ground surface topography, and
- 100-year floodplain limits

When the transition between riparian and upland areas is gradual, the line shall be drawn at the point where the habitat is clearly upland based upon factors such as species composition, vegetation density and topography
