Tracks are not shown to scale. Measurements shown in inches.
How to Make Your Very Own Folding Tracking Ruler

1. Cut out each ruler. **DO NOT** cut off the blank square at the end. That is where you will be connecting your two rulers to make one folding Tracking Ruler.

2. Stack your two rulers, marking-side up, with the punched holes (shown here as a black dot in the blank square at the end of the ruler) line up.

3. Push your metal fastener through the holes in both rulers.

4. Turn the rulers, with the fastener inserted, over. Separate the two legs of the fastener, then press the legs apart and push them down snugly against the backside of the rulers. You may need to ask an adult for help to get the fastener nice and snug.

5. Bend the legs of the fastener so that they stay tucked behind your Tracking Ruler.

6. Your Tracking Ruler should be able to swivel so that you can measure in inches or centimeters, and so you can swivel it closed when not in use.

7. Now let’s go outside and get tracking!
