1. EXECUTIVE SUMMARY

This project consists of widening Kolb Road from two to three lanes between the intersections at Sabino Canyon Road and Sunrise Drive. The project will also include constructing improved shoulders, including the addition of paved shoulders.

The purpose of this report is to evaluate the current traffic operations and safety of the corridor as well as projected future performance. Kolb Road, as well as three signalized intersections (Kolb Road/Sabino Canyon Road, Kolb Road/Snyder Road, and Kolb Road/Sunrise Drive), and one major unsignalized intersection (Kolb Road/Territory Drive) were analyzed in this report.

Kolb Road from Sabino Canyon Road to Sunrise Drive is currently a two-lane, undivided roadway for much of the project length. Near the north end of the project area, there is an existing two-way center left turn lane which runs for approximately ¼ mile. The south leg of the Kolb Road/Sunrise Drive intersection has a raised median, which is approximately 300 feet long. The posted speed limit on Kolb Road is 35 mph. The existing ADT is 11,747 vehicles per day north of Snyder Road and 12,618 vehicles per day south of Snyder Road.

Based on historic growth in the area, it is assumed that traffic volumes in the project area will increase approximately 0.50% per year. In 2040, the horizon year for this study, Kolb Road is projected to carry approximately 13,200 vehicles per day north of Snyder Road and approximately 14,200 vehicles per day south of Snyder Road.

The operational analysis shows that all four study intersections and Kolb Road will continue to operate efficiently with this project through 2040. Based on the projected volumes, a northbound right turn lane is warranted at the Kolb Road/Snyder Road intersection. However, analyses show that the intersection will operate efficiently with or without the right turn lane.

An analysis of safety along the corridor showed that the predicted number of crashes (using the *Highway Safety Manual* methodology) would decrease with the project compared to the future conditions without the project.

The addition of a northbound right turn lane at the Kolb Road/Snyder Road intersection is expected to decrease the number of predicted crashes at the intersection slightly (from 2.27 crashes/year to 2.21 crashes/year). However, the crash history shows only one northbound crash at the intersection in five years, which may or may not have been related to the right turn movement. Given the low number of crashes, the fact that the intersection will operate efficiently with or without the addition of a northbound right turn lane, and the considerable cost which would be associated with the construction at this location (given the site constraints), it is not recommended that a northbound right turn lane be constructed at Kolb Road and Snyder Road.

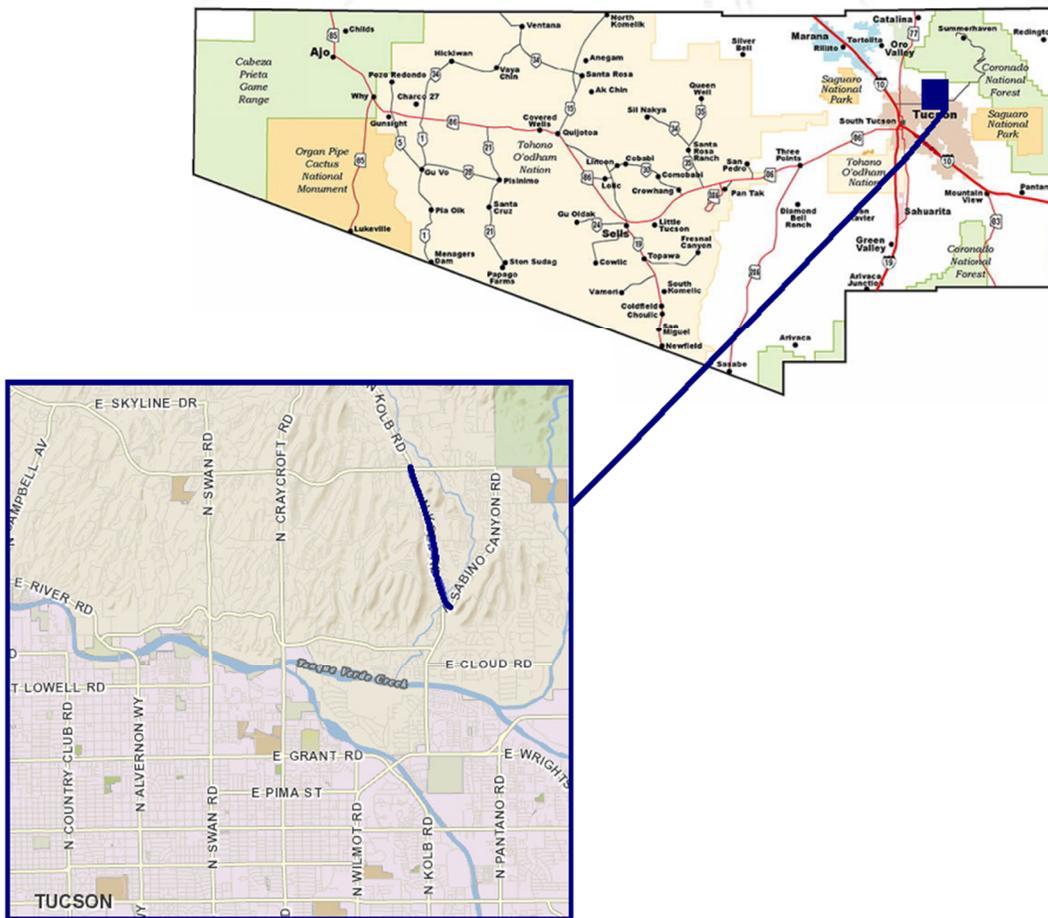

However, the following improvements should be constructed with this project:

- Widen Kolb Road to a three-lane roadway by adding a center two-way left turn lane throughout the project area. This will improve operations and safety by removing turning vehicles from the travel lanes.
- Improve the transition from two to one northbound lanes on Kolb Road just north of Sabino Canyon Road to avoid speeding and safety issues.
- Provide separate bike and right turn lanes for southbound travel at the Bashas' shopping center driveways.
- Include paved shoulders throughout the project area to provide multi-modal connectivity.
- Provide sidewalk along one side of the roadway to provide pedestrian connectivity through the corridor.
- Add street lighting to Kolb Road between Territory Drive and Sunrise Drive, including at the intersection of Kolb Road and Territory Drive.
- Remove, protect, or delineate roadside obstructions.
- Construct a solar powered flasher (or other comparable device, as determined during the design phase) near Fire Station 73 to improve general safety.

2. INTRODUCTION

This project consists of widening approximately 2.1 miles of Kolb Road from an existing two lane roadway to a three lane roadway (one travel lane per direction and a two-way left turn lane) between Sabino Canyon Road and Sunrise Drive, in compliance with the 1997 Bond program. Other potential improvements to be considered and evaluated include provisions for pedestrians and other users, as well as street lighting, improved access for emergency services, and paved shoulders. Figure 1 shows the project location.

Figure 1. Project Area

The purpose of this report is to analyze existing conditions and projected future conditions for Kolb Road from Sabino Canyon Road to Sunrise Drive, including four major intersections, for the horizon year of 2040.

3. EXISTING CONDITIONS

3.1. LAND USE

The land uses within the study area are primarily residential: single family subdivisions, single family homes on one- to five-acre lots, and multi-family buildings. Apartment complexes are located at the southeast corner of the Sunrise Drive/Kolb Road intersection and east of Kolb Road at its intersection with Snyder Road. While there are some vacant residential sites, most of the project area has already been developed.

Commercial uses also occur within the project limits. Bashas' grocery store anchors a group of retail stores and restaurants on the southwest corner of the Kolb Road/Sunrise Drive intersection. A second group of retail stores is located on the southeast corner of the same intersection. One four-acre commercial site located west of Kolb Road and south of Territory Drive has been developed. Other land uses include the Rural Metro fire station across from Cripple Creek Drive.

Most of the existing zoning is Single Residence Zone (CR-1), with some Suburban Ranch Zone (SR) lots remaining at the northern and southern ends of the study area. The east side of the intersection of Kolb Road with Snyder Road and the intersection of Kolb Road with Sunrise Drive are zoned for commercial, apartment, and office use – Local Business Zone (CB-1) and Transitional Zone (TR).

3.2. ROADWAY NETWORK

There are a total of three signalized intersections within the study area as well as one major un-signalized intersection, as shown in Figure 2. The lane configuration and available storage lengths for the existing turn lanes at each of the intersections are also shown in the figure. In the project area, Kolb Road is designated as a scenic arterial roadway in Pima County's *Major Streets and Scenic Routes Plan*¹. The existing roadway is uncurbed, and the speed limit for Kolb Road is 35 mph. There is no existing street lighting along the corridor. However, street lighting currently exists at each of the three signalized intersections.

Of particular note are the lane transitions at the north and south ends of the project. The transition on the south end is 730 feet in length, which is appropriate for a design speed of 60 mph. At the north end of the project, the southbound bike lane becomes a shared bike lane and right turn lane into the Bashas' parking lot, then the bike lane is dropped completely after the intersection.

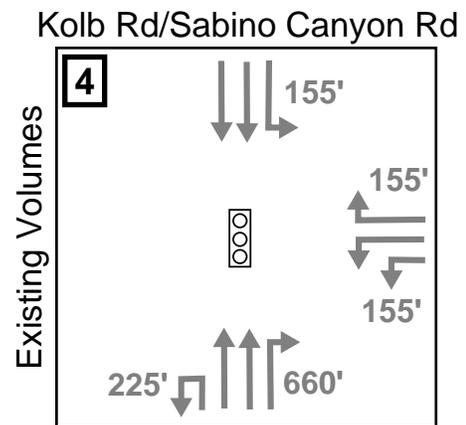

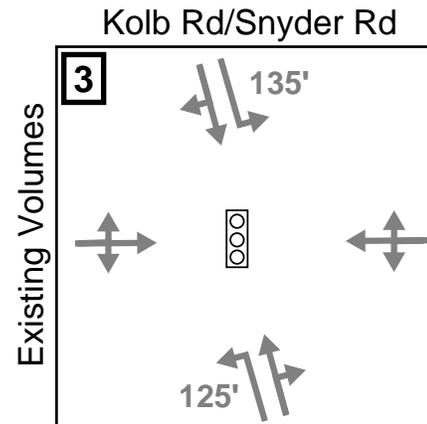

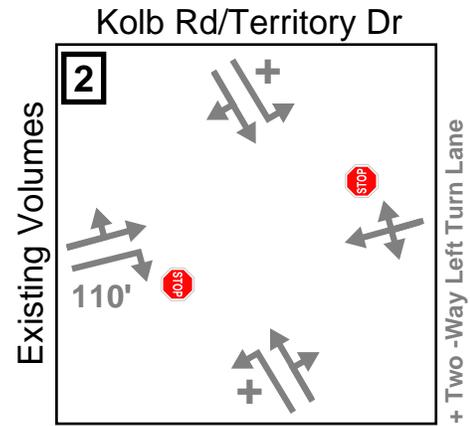

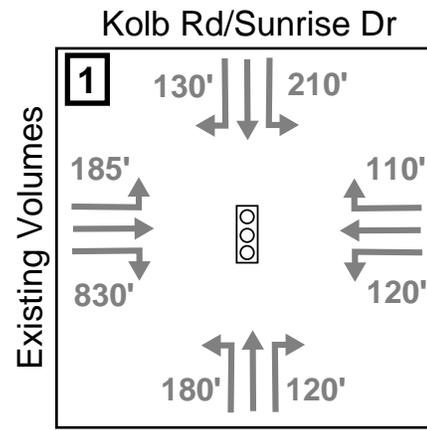

3.3. TRAFFIC VOLUMES

Traffic volumes were collected by Pima County in October 2016, and were provided to Psomas for this study. From the traffic volume data, it was found that the AM peak hour for the corridor is from 7:15 AM to 8:15 AM, and the PM peak hour is from 4:30 PM to 5:30 PM. The traffic volume data is included in Appendix A.

Figure 4 shows the existing traffic volumes at the study intersections as well as the existing daily volumes in the project area. As seen in the figure, Kolb Road currently carries approximately 11,750 vehicles per day north of Snyder Road and approximately 12,600 vehicles per day south of Snyder Road. Daily volumes on Snyder Road and Territory Drive are significantly lower.

3.5. SPEED SURVEY

A speed survey was conducted by Psomas to evaluate the prevailing driver speed behavior within the project area. Specifically, speed data was collected for northbound traffic on Kolb Road just north of Sabino Canyon Road. The results of the data collection are shown in Figure 3. As seen in the figure, the posted speed limit for Kolb Rd throughout the project is 35 mph. According to the speed survey, the 85th percentile speed was 46.2 mph, with the median speed being 40.1 mph. Higher speeds were more common during low volume periods.

Figure 3. Speed Survey Results

3.6. LEVEL OF SERVICE ANALYSIS

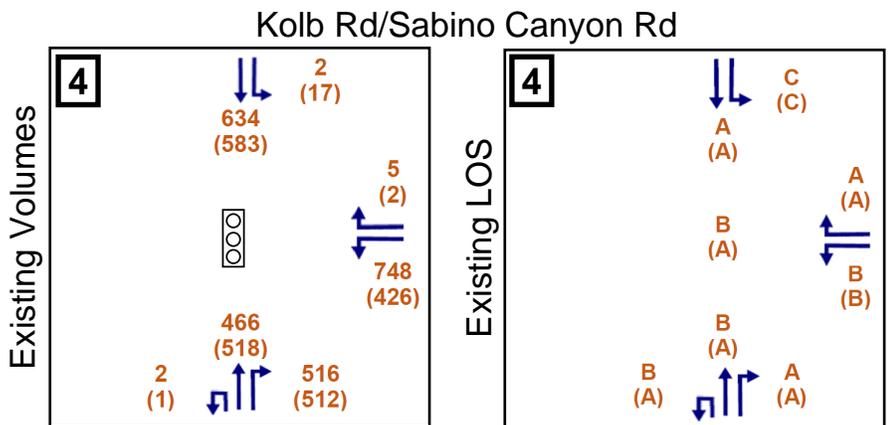

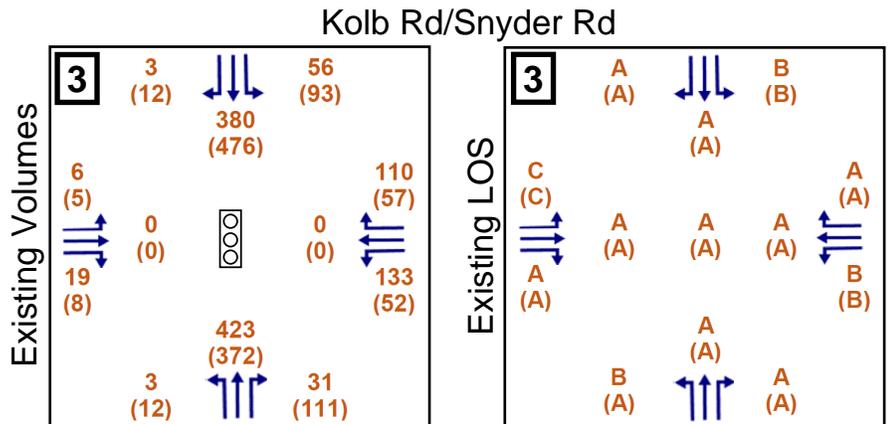

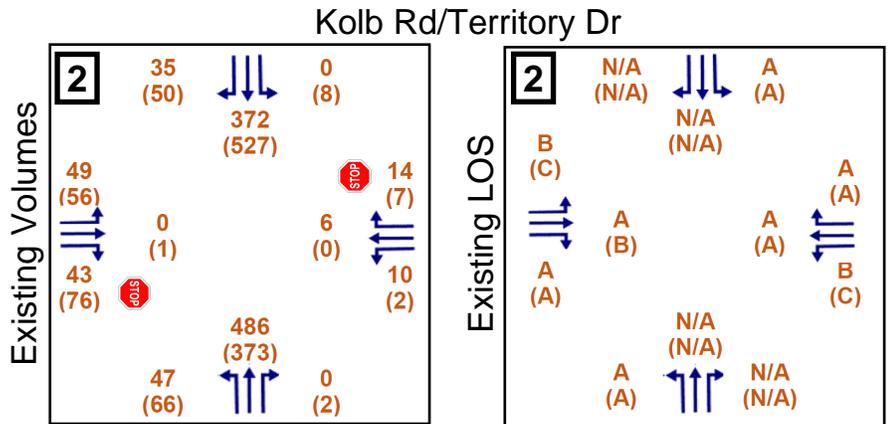

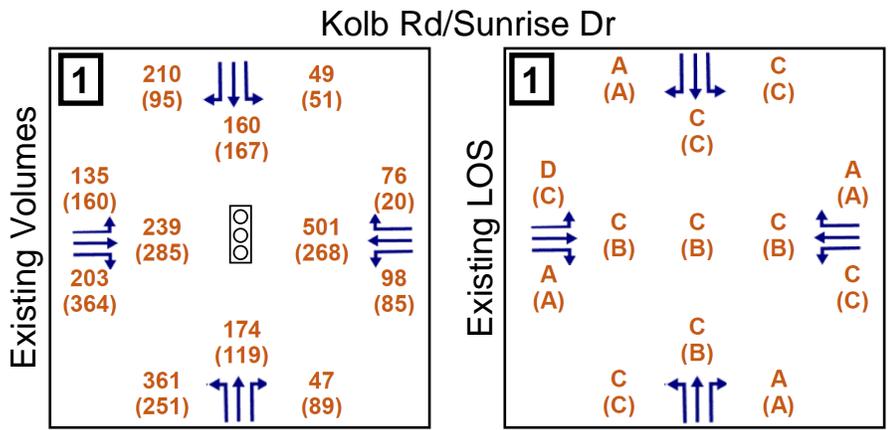

The Level of Service (LOS) is a qualitative measure that describes operational conditions in terms of travel speed (for arterials), density (for freeways and ramps), and delays (for intersections). LOS ranges from A to F, with A representing the best operating conditions and F representing the worst. Note that LOS D is generally considered acceptable for facilities in urban areas.

The existing Level of Service (LOS) at each of the signalized intersections in the study area was evaluated using *SimTraffic*, a traffic modeling software that follows the methodology of the *Highway Capacity Manual*². Model inputs include the existing intersection geometry and the traffic volumes collected in 2016. The existing signal timings obtained from Pima County were also used in both the AM and PM peak hour models. The *SimTraffic* reports are included in Appendix B.

The resulting LOS are recorded in Figure 4. Note that overall intersection LOS is not defined for two-way stop controlled intersections. Under existing conditions, all three signalized intersections currently are operating at LOS C or better during the peak hour. Further, all movements at all four study intersections are operating at LOS D or better in the AM peak hour and at LOS C or better in the PM peak hour. Most of the movements are operating at LOS B or better. Segment LOS is also depicted in Figure 4 using the thresholds in the generalized Quality/LOS tables developed by the Florida Department of Transportation³. Note that all roadway segments currently operate at LOS D or better.

3.7. CRASH HISTORY

Psomas obtained crash data from Pima County for the latest available five-year period for the project area, September 2011 through August 2016. This section presents an analysis of the records obtained, which are included in Appendix C. During the five-year study period, there were a total of 93 crashes in the study area; 48 crashes at signalized intersections, 3 crashes at the major unsignalized intersection of Kolb Road and Territory Drive, and 42 crashes on road segments between intersections.

Table 1 shows the crashes at both the signalized and un-signalized intersections. Approximately 41% of the intersection crashes were rear-end crashes. The next most common type of crash was angle crashes (22%), followed by single vehicle and left turn crashes (16% each).

Table 1. Intersection Crash Type Summary

Intersection with Kolb Road	Angle	Left Turn	Sideswipe	Rear End	Single Vehicle	Head On	Bicycle/ Pedestrian	Other	Total
Sabino Canyon Road	2	0	1	3	4	0	1	0	11
Snyder Road	5	2	0	3	1	0	0	0	11
Sunrise Drive	3	6	1	14	2	0	0	0	26
Territory Drive	1	0	0	1	1	0	0	0	3
Total	11	8	2	21	8	0	1	0	51

Table 2 shows the crashes that occurred along Kolb Road that did not occur at the four study intersections. For the analysis, Kolb Road was split into three segments, as shown in the table. Approximately 33% of the segment crashes were single vehicle crashes. The second most common type was rear-end (29%), followed by angle crashes (17%).

Table 2. Roadway Segment Crash Type Summary

Kolb Road Segment	Angle	Left Turn	Sideswipe	Rear End	Single Vehicle	Head On	Bicycle/ Pedestrian	Other	Total
Sabino Canyon Rd to Snyder Rd	0	0	5	5	10	1	1	1	23
Snyder Rd to Territory Dr	0	0	1	4	3	0	0	0	8
Territory Dr to Sunrise Dr	7	0	0	3	1	0	0	0	11
Total	7	0	6	12	14	1	1	1	42

The majority of angle crashes that occurred on the roadway segments involved drivers who failed to yield when exiting from private driveways onto Kolb Road. All these angle crashes occurred on the short segment between Territory Drive and Sunrise Drive. Also of note are the sideswipe crashes that occurred on the segment of Kolb Road just north of Sabino Canyon Road. Of the five sideswipe crashes, three can be attributed to northbound merging of vehicles from two lanes to one lane. As previously discussed, the 85th percentile speed for northbound traffic in this area is 46 mph. The high speeds and the sideswipe crash history are likely related to the wide cross-section in this area and the long lane reduction taper from two to one northbound lanes, which is over twice as long as the Pima County standard. These factors may lead drivers to attempt to pass others in this area.

Tables 3, 4 and 5 present the crash rates and crash severity for signalized intersections, un-signalized intersections, and road segments. The crash rates were calculated using the following equations:

$$Crash\ Rate_{(Road\ segment)} = \frac{Crashes \times 10^6}{365 \times Period \times ADT \times Length} = Crashes/MVM$$

$$Crash\ Rate_{(Intersection)} = \frac{Crashes \times 10^6}{365 \times Period \times ADT_{(Entering)}} = Crashes/MEV$$

The severity index is calculated based on the following equation, which weighs fatal and injury accidents more heavily than property damage only crashes.

$$Severity\ Index = \frac{5.8 \times (C_F + C_I) + 2 \times (C_{NI} + C_P) + C_N}{Total\ Crashes}$$

Where,

C_F = Crashes with fatality

C_I = Crashes with incapacitating injury

C_{NI} = Crashes with non-incapacitating injury

C_P = Crashes with possible injury

C_N = Crashes without injury

From Table 3, only the intersection at Sabino Canyon Road has a severity index above the Pima County average of 1.39. However, the crash rate at that intersection (0.24 crashes/MEV) is considerably lower than the County average of 0.68 crashes/MEV. Overall, there were no fatalities at signalized intersections in the project area during the five-year period (9/1/2011 to 8/31/2016). Most (90%) of the crashes that occurred were of a low severity (no injury or possible injury), and two caused serious injury.

Table 3. Crash Severity for Signalized Intersections

Intersection with Kolb Road	Fatality	Incapacitating Injury	Non-Incapacitating Injury	Possible Injury	Property Damage Only	Total	Severity Index	Entering Veh/Day	Crash Rate Per MEV
Sabino Canyon Rd	0	1	0	2	8	11	1.62	24,737	0.24
Snyder Rd	0	0	1	2	8	11	1.27	13,793	0.44
Sunrise Dr	0	1	0	5	20	26	1.38	19,429	0.73
Total	0	2	1	9	36	48	1.41	N/A	N/A

Pima County Average Crash Rate: 0.68 crashes/MEV
Pima County Average Severity Index: 1.39

Table 4 shows that the crash rate and severity for the most recent five years at the Kolb Road/Territory Drive intersection are both very low, and are considerably lower than the County averages of 0.39 crashes per MEV and a severity index of 1.44.

Table 4. Crash Severity for Major Unsignalized Intersections

Intersection with Kolb Road	Fatality	Incapacitating Injury	Non-Incapacitating Injury	Possible Injury	Property Damage Only	Total	Severity Index	Entering Veh/Day	Crash Rate Per MEV
Territory Dr	0	0	0	0	3	3	1.00	13,414	0.12

Pima County Average Crash Rate: 0.39 crashes/MEV
Pima County Average Severity Index: 1.44

The crash rate and severity for Kolb Road segments are shown below in Table 5. Of the three segments, only the segment between Snyder Road and Territory Drive has a severity index above the Pima County average of 1.43. Also notable is the crash rate for the roadway segment between Territory Drive and Sunrise Drive, which is almost triple the average crash rate in Pima County for road segments. Although the high crash rate is likely due in part to the short length of the segment, the number of conflicts generated by the turns in and out of the commercial driveways in the area negatively impact safety conditions.

On that segment, 6 of the 11 crashes involved drivers exiting a driveway from the Bashas' shopping center driveways. Although the crash rate is high (almost three times the County average rate of 1.04 crashes per MVM), the severity index is below the County average of 1.43 for high-volume roadways.

Table 5. Crash Severity for Segments

Kolb Road Segment	Fatality	Incapacitating Injury	Non-Incapacitating Injury	Possible Injury	Property Damage Only	Total	Severity Index	Vehicles/Day	Segment Length (mi)	Crash Rate Per MVM
Sabino Canyon Rd to Snyder Rd	0	0	2	2	19	23	1.17	12,618	1.07	0.93
Snyder Rd to Territory Dr	0	1	1	1	5	8	1.85	11,747	0.89	0.42
Territory Dr to Sunrise Dr	0	0	1	3	7	11	1.36	11,747	0.17	3.02
Total	0	1	4	6	31	42	1.35	N/A	N/A	N/A

Pima County Average Crash Rate: 1.04 crashes/MVM

Pima County Average Severity Index: 1.43

4. FUTURE TRAFFIC VOLUMES (2040)

The Pima Association of Governments (PAG) maintains a travel demand model that estimates the future volumes for the Tucson metropolitan area. The latest model provides projections for the year 2045, and shows volumes of 13,600 vehicles per day for Kolb Road between Sabino Canyon Road and Snyder Road, and 10,900 vehicles per day for Kolb Road between Snyder Road and Sunrise Drive. These volumes represent annual average growth rates of -0.3% and 0.3% per year, respectively (Table 6). Historic traffic volumes available from PAG are also shown in Figure 5, and indicate that volumes have not returned to their pre-recession levels.

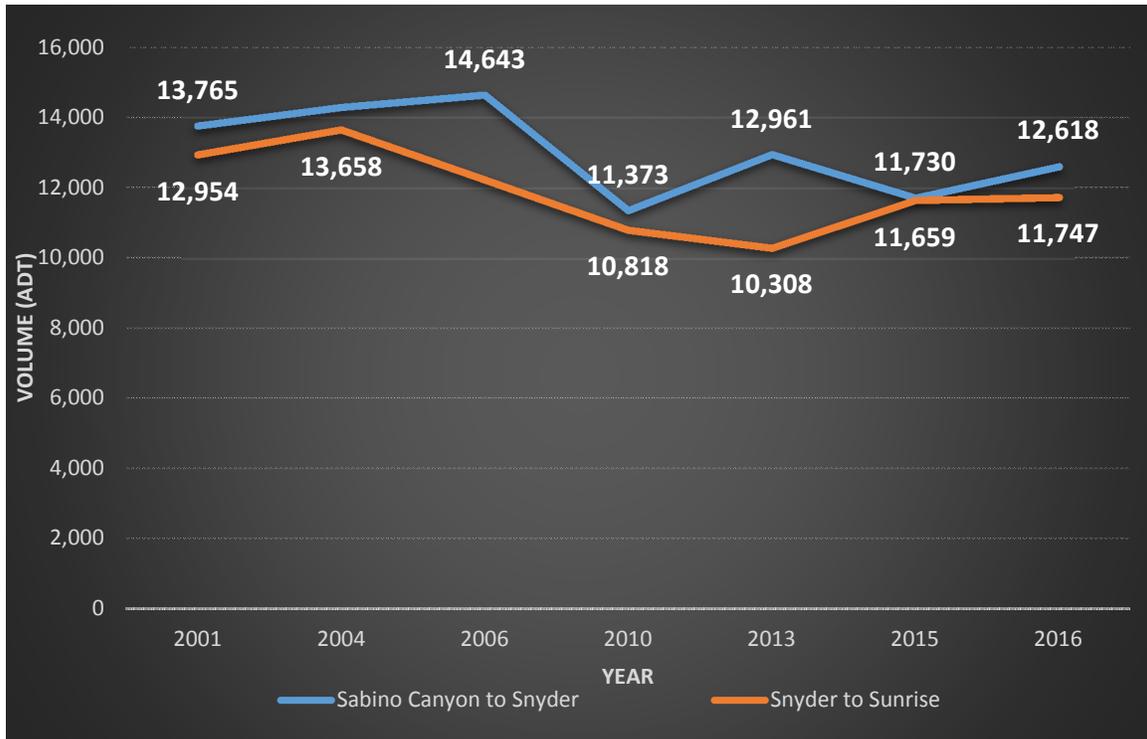

Table 6. Segment Existing and Projected Volumes

Kolb Road Segment	Existing (2016) Volume (veh/day)	PAG Projected 2045 Volume (veh/day)	Annual Growth Rate
Sabino Canyon Rd to Snyder Rd	12,618	13,600	0.3%
Snyder Rd to Sunrise Dr	11,747	10,900	-0.3%

While most of the area is already developed, it is reasonable to assume that residual development, combined with the economic recovery and an improved roadway will result in small increases in traffic volumes. Therefore, to be conservative and to provide a consistent estimate throughout the project area, an annual growth rate of 0.5% per year was used for this report. The resulting projected peak hour and daily volumes are shown in Figure 6. As seen in the figure, Kolb Road is expected to carry approximately 13,200 vehicles per day north of Snyder Road and approximately 14,200 vehicles per day south of Snyder Road.

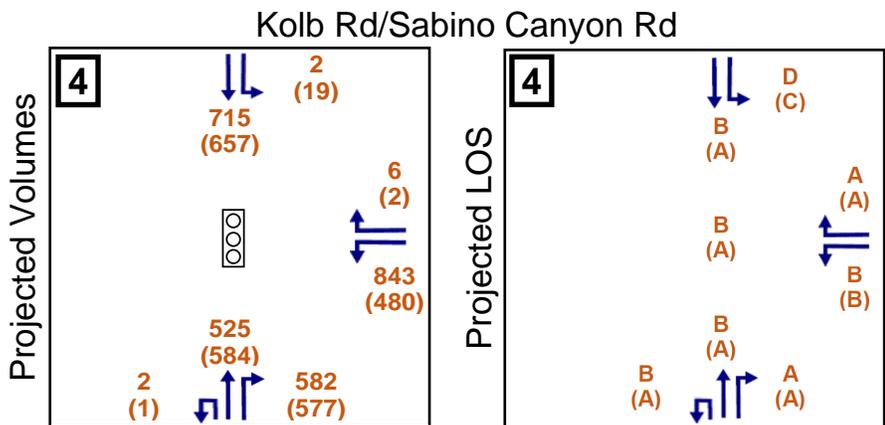

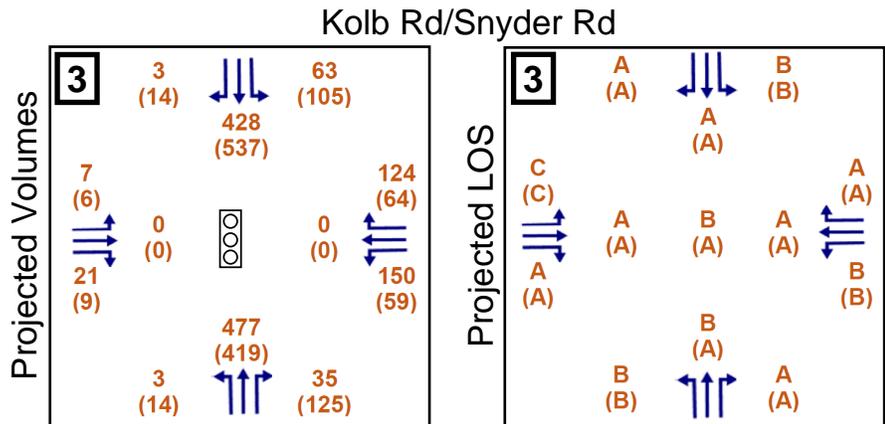

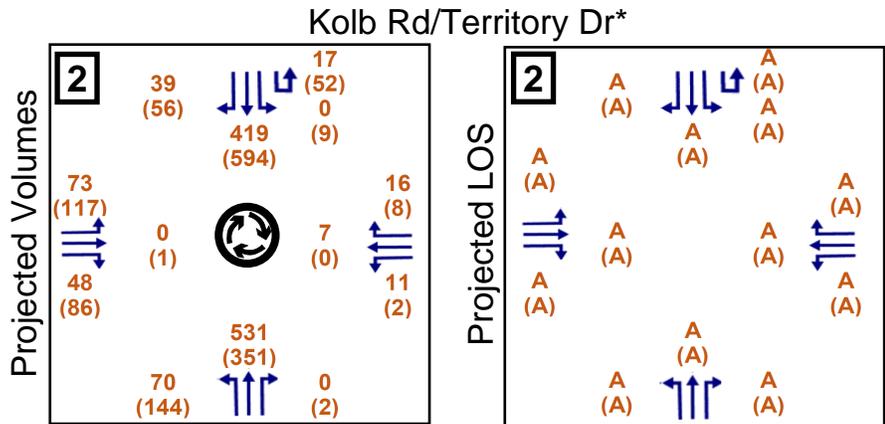

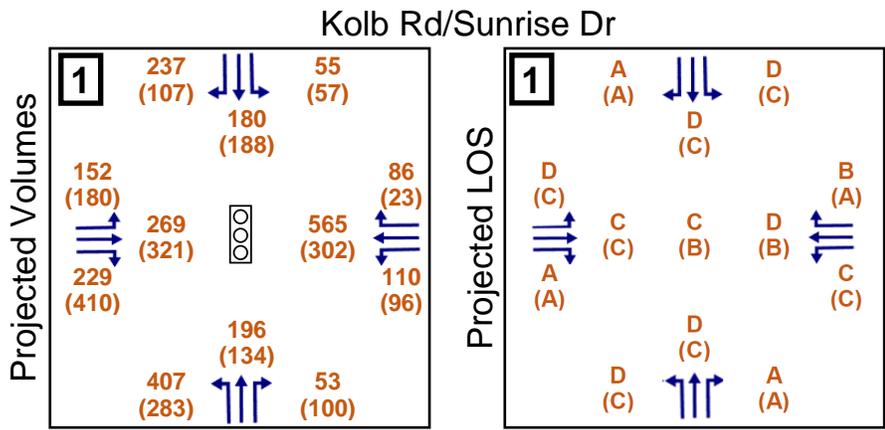

Note that Figure 6 shows the volumes and LOS for the recommended roundabout alternative at the intersection of Kolb Road and Territory Drive. The development of this recommendation is discussed in detail in Section 6.

Figure 5. Historic PAG Volumes

LEGEND	
xx	AM Peak Hour Characteristics
(xx)	PM Peak Hour Characteristics
xx,xxx	Daily Characteristics

*See Section 6 for additional discussion about the recommended improvements at this intersection.

5. FUTURE CONDITIONS – WITHOUT PROJECT (2040)

For this scenario, the lane configuration and storage lengths remained unchanged from the existing conditions. The following sections discuss the projected operation and safety analyses for the without project scenario.

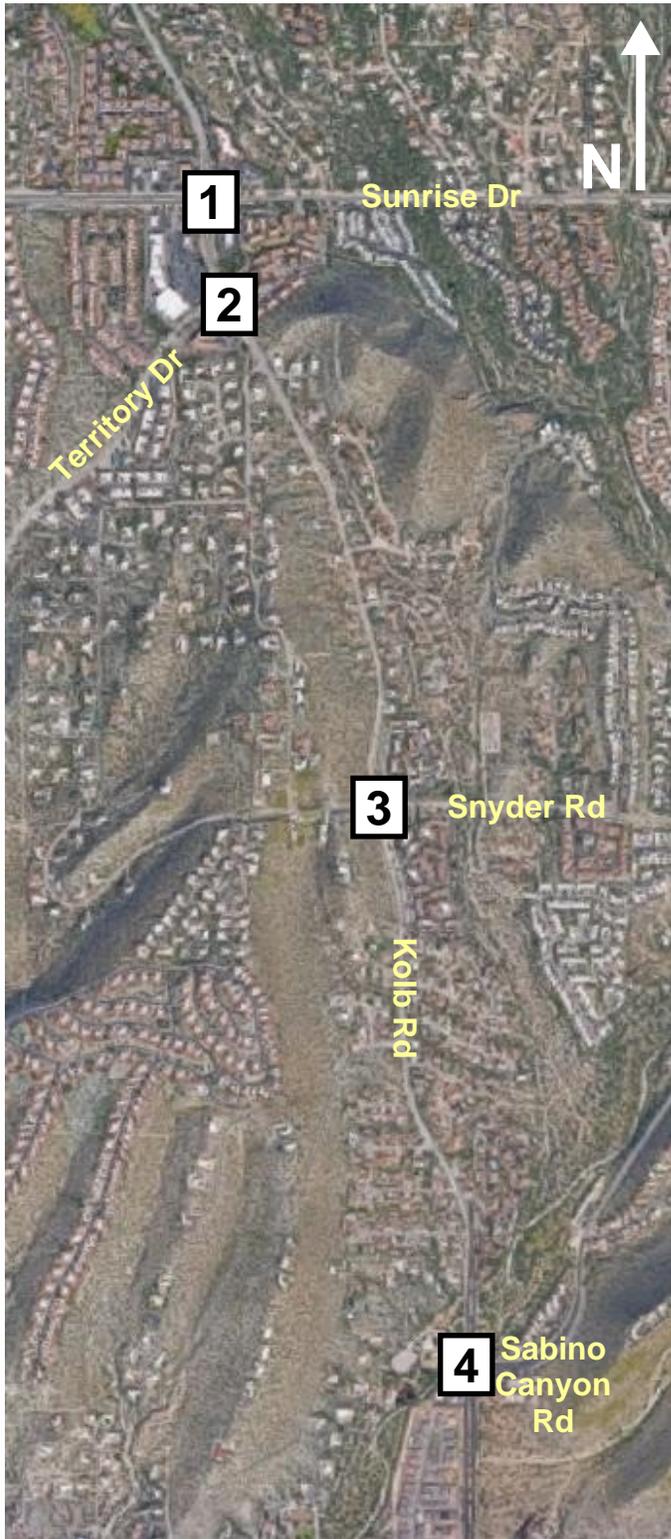

5.1. OPERATIONAL ANALYSIS

The LOS for each of the signalized intersections in the study area was found using *SimTraffic* and the projected volumes shown in Figure 4. The *SimTraffic* reports are included in Appendix B.

As seen in Figure 4, all of the signalized intersections are expected operate at LOS C or better in the AM peak hour and at LOS B or better in the PM peak hour. Further, all of the movements are expected to operate at LOS D or better in the AM peak hour and at LOS C or better in the PM peak hour. At Kolb Road and Territory Drive, all movements are expected to operate at LOS C or better in both peak hours. Further, both segments of Kolb Road are expected to continue to operate at LOS D or better in 2040.

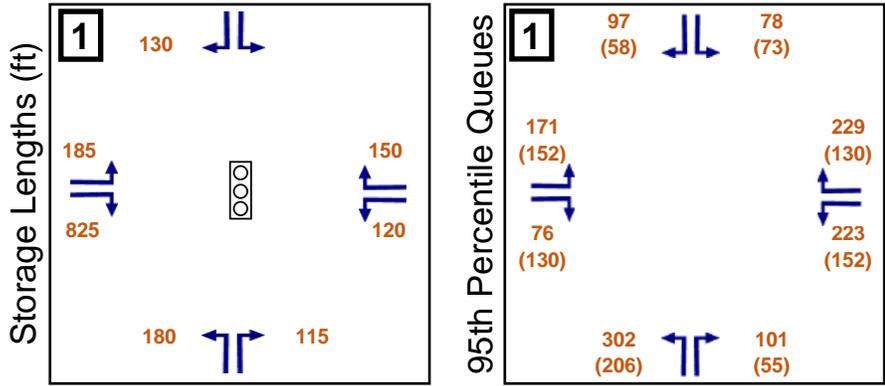

An evaluation of the 95th percentile queues was also conducted for each of the intersections in the study area. The 95th percentile queues are those which are exceeded only 5% of the time, and are typically used to determine the required turn lane storage lengths. The turn lane storage lengths were found to be sufficient at the Kolb Road/Snyder Road and Kolb Road/Territory Drive intersections, but several of the movements at the Kolb Road/Sabino Canyon Road and Kolb Road/Sunrise Drive intersections exceed the existing storage lengths. Figure 7 shows the turn bay storage lengths and predicted 95th percentile queue lengths for the AM and PM peak hour periods.

The future northbound left turn queue at Sunrise Drive is significantly longer than the available storage (300 feet vs. 180 feet), and falls within the project limits. Therefore, it is recommended that the northbound left turn storage be extended to 300 feet with this project. The queues for the westbound left- and right-turns on Sunrise Drive will also exceed the available storage, but they fall outside of the limits of this project.

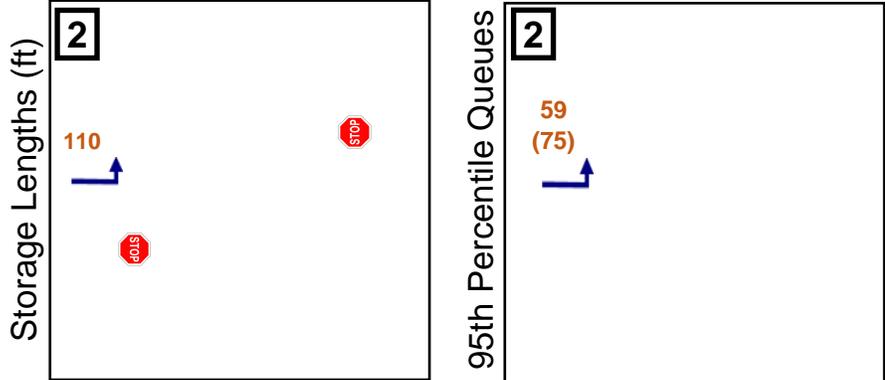

LEGEND
 xx AM Peak Hour Queue Lengths (ft)
 (xx) PM Peak Hour Queue Lengths (ft)
 xx Turn Lane Storage Length (ft)

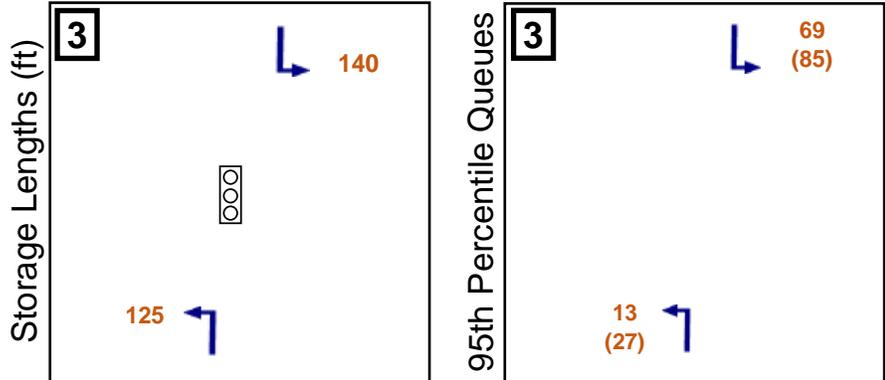

Kolb Rd/Sunrise Dr

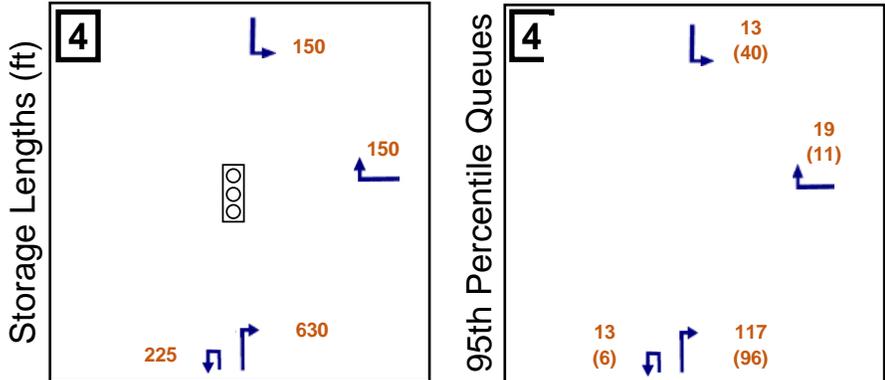

Kolb Rd/Territory Dr

Kolb Rd/Snyder Rd

Kolb Rd/Sabino Canyon Rd

Despite the queuing issue, both signalized intersections at the ends of the project (Sunrise Drive and Sabino Canyon Road) are expected to operate efficiently in the future. Therefore, the only recommended improvement is the lengthening of the storage for northbound left turns at Sunrise Drive.

5.2. SAFETY ANALYSIS

A crash safety analysis was conducted for each intersection and for Kolb Road using the Predictive Method for Urban and Suburban Arterials found in the *Highway Safety Manual, 1st Edition*⁴. This method analyzes the characteristics of each segment and intersection within the project area to predict the average crash frequency in crashes per year. Table 7 shows the results of the predictive method for the existing conditions and the future conditions without the project. More detailed results of the predictive method are included in Appendix D.

Table 7 shows that the number of crashes per year at each intersection is expected to increase at each intersection in 2040, which is a function of the projected increase in traffic volumes. The table also includes the existing observed crashes per year for comparison.

Table 7. Predicted Crashes per Year

Roadway Segments	Existing Observed	Existing Predicted	2040 Without Project	Percent Change*
Kolb Rd, Sabino Canyon Rd to Snyder Rd	4.60	4.16	4.36	4.7%
Kolb Rd, Snyder Rd to Territory Dr	1.60	2.04	2.17	6.6%
Kolb Rd, Territory Dr to Sunrise Dr	2.20	1.10	1.19	7.8%
Intersections	Existing Observed	Existing Predicted	2040 Without Project	Percent Change*
Kolb Rd/Sabino Canyon Rd	2.20	2.49	2.66	6.8%
Kolb Rd/Snyder Rd	2.20	2.07	2.27	9.4%
Kolb Rd/Territory Dr	0.60	0.95	1.04	9.2%
Kolb Rd/Sunrise Dr	5.20	3.80	4.11	8.3%

*Percent change is from existing predicted to 2040 without project

6. FUTURE CONDITIONS – WITH PROJECT (2040)

6.1. PROPOSED IMPROVEMENTS

6.1.1. Roadway Improvements

As previously discussed, the project consists of widening Kolb Road from two to three lanes between the intersections of Sabino Canyon Road and Sunrise Drive by adding a center two-way left turn lane. All existing turn lanes will remain as-is during the project.

There are no planned changes at the Kolb Road/Sunrise Drive intersection or for any of the approaches at the Kolb Road/Sabino Canyon Road intersection. However, the lane drop from two to one lanes on the northbound section of Kolb Road just north of Sabino Canyon Road will be shortened to facilitate safer and smoother merging.

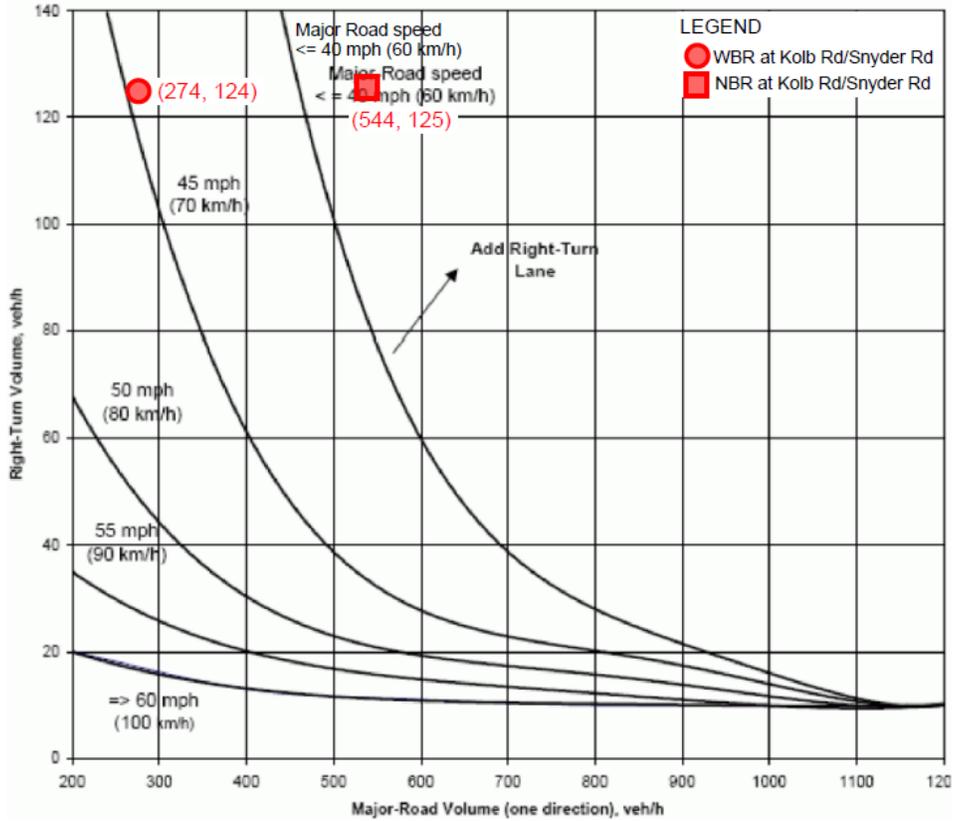

Pima County has expressed a desire to warn drivers of emergency vehicles entering the roadway from Fire Station 73. It is recommended that solar powered flashers (or other comparable devices, as determined during the design phase) be installed to provide advance notice to drivers. The flasher would only turn on when activated by a fire vehicle.

6.1.2. Turn Lane Needs

A turn lane warrant analysis was conducted at the Snyder Road intersection for northbound right turns and westbound right turns. The need for new turn lanes was evaluated using the 2040 projected volumes and the turn lane warrants in the *Pima County Subdivision and Development Street Standards*⁵.

Figure 7 presents the results of that evaluation. As seen in the figure, the westbound right turn does not meet the warrant because of the low total approach volume, but the northbound right turn volume does meet the warrant. The eastbound and southbound right turn volumes are very low, so the turn lane warrant was not evaluated for those two approaches.

Figure 8. Right Turn Lane Warrants

6.1.3. Access Management

Between Sabino Canyon Road and Gate Ridge Road (just south of Territory Drive), Kolb Road almost exclusively serves residential properties. There are numerous driveways along this segment of Kolb Road to provide access to those properties, including many which provide access to only one residence. Therefore, it is necessary to provide safe access throughout this segment, which will be accomplished with the addition of a two-way left turn lane.

Conversely, the segment from Sunrise Drive to just south of Territory Drive is much more commercial, and access to existing development is concentrated at a few driveways. Generally speaking, direct access is not as often provided for commercial areas as it is for residential areas. The existing roadway provides full access along Kolb Road at three locations in this area, including at Territory Drive.

In the most recent five years of available data (09/01/2011-08/31/2016), there were 11 total crashes on Kolb Road between Sunrise Drive and Territory Drive, including 6 crashes involving drivers exiting the Bashas' shopping center on the west side of Kolb Road. At least 4 of the crashes involved drivers making a left turn out of the shopping center; 1 crash involved a right turn out of the shopping center, and the other is unclear from the data. Although this is a short segment, the crash rate is three times higher than the County's average rate.

To provide better access management and help improve safety in the area, the following three alternatives have been discussed:

- Alternative 1 – Improve shoulders, add lighting, and clarify southbound shared right turn/bike lane (this represents what is already planned with the project)
 - Paved shoulders will be widened and a safety edge will be added
 - Lighting will be added throughout the segment to improve nighttime visibility
 - The existing southbound shared right turn/bike lane at the main Bashas' shopping center driveway may be a source of confusion for drivers. With the project, separate right turn and bike lanes will be provided at this location, and each will be more clearly delineated to minimize confusion.
- Alternative 2 – In addition to the improvements in Alternative 1, restrict Bashas' shopping center driveway access to right-in right-out only with a raised pork chop median
 - By prohibiting left turn movements out of the driveway, the left turn conflicts with through traffic on Kolb Road would be eliminated. Drivers wishing to travel north would likely divert to Territory Drive, but they can also access Sunrise Drive directly.
 - With additional traffic on Territory Drive, delays for drivers on Territory Drive turning onto Kolb Road would likely increase. Although a signal would likely be warranted, installation is not recommended because of the intersection's proximity to Sunrise (800 feet). As a result, the eastbound left turn delay at the Territory Drive intersection would increase to approximately 55 seconds.

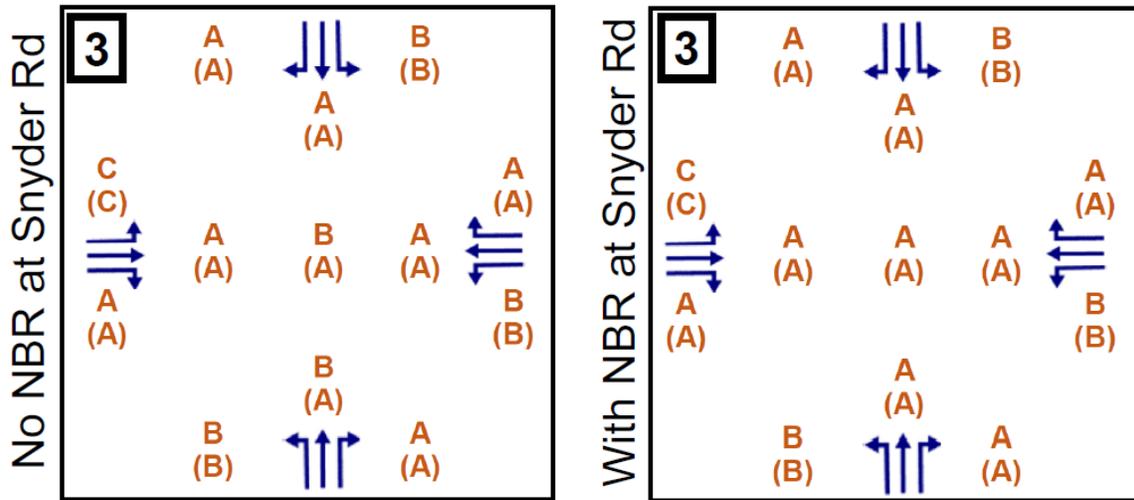

- Full access would be maintained for the commercial driveway on the east side of Kolb Road.
- Alternative 3 – In addition to the improvements in Alternative 1, extend the median on Kolb Road south past the shopping center driveways and construct a one-lane roundabout at the Kolb Road/Territory Drive intersection.
 - By extending the raised median, all of the commercial driveways between Sunrise Drive and Territory Drive would operate at right-in right-out only, reducing potential conflicts. The only exception would be to allow left turns out of the southern driveway for the shopping center on the east side of the road in order to avoid excessively circuitous detours.
 - As with Alternative 2, drivers would likely divert to Territory Drive. A single lane roundabout would minimize delays and improve safety at the Territory Drive/Kolb Road intersection. The roundabout would also slow traffic through the area, facilitate pedestrian crossing across Kolb Road and act as a visual separation between the commercial area near Sunrise Drive and the residential areas further south.

6.2. LEVEL OF SERVICE ANALYSIS

Because of the turn lane warrant analysis results and various alternatives for improvements at the northern end of the project, multiple build alternatives were evaluated using SimTraffic. First, the potential change in operations with the addition of a northbound right turn lane on Kolb Road at Snyder Road was evaluated. The volumes used match those shown in Figure 6. The *SimTraffic* reports are included in Appendix B.

Figure 9 presents a comparison of the LOS for the Kolb Road/Snyder Road intersection with and without the addition of a northbound right turn lane at Snyder Road. Because the project is not expected to add any turn lanes at any of the other study intersections, they are each expected to operate with the project as they will without the project, as shown in Figure 6. As seen in Figure 9, the Kolb Road/Snyder Road intersection is expected to operate efficiently under either scenario, including all movements operating at LOS C or better in both peak hours.

Figure 9. Kolb Road and Snyder Road Projected Future Operations

In addition, there are three access management alternatives at the north end of the project. Recall that the alternatives include:

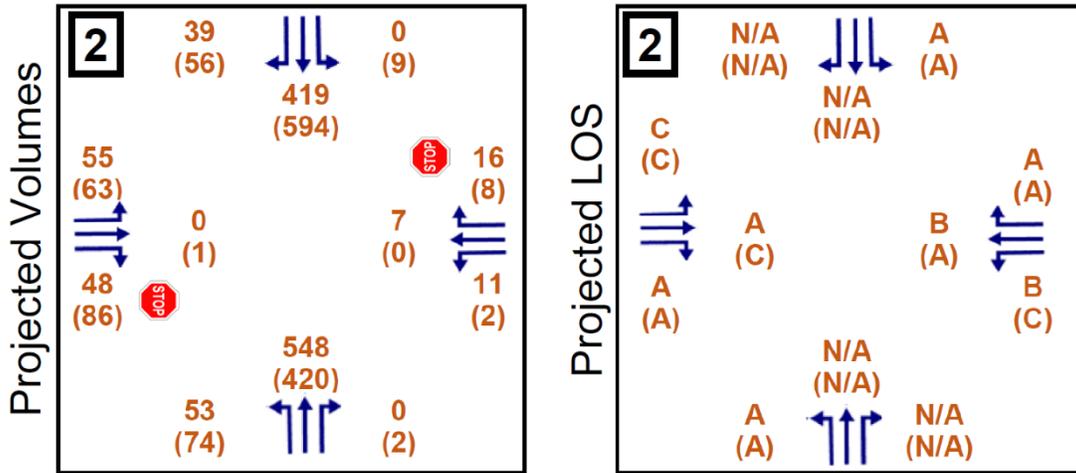

1. Do nothing beyond the planned project improvements, which include improved shoulders, lighting, and separation of the southbound right turn lane and bike lane approaching the Bashas' driveway
2. Construct a median island on the existing full-access Bashas' driveway to convert it to a right-in right-out only driveway
3. Construct a roundabout at the Kolb Road/Territory Drive intersection and extend the existing median south to Territory Drive

Because access to the commercial areas on either side of Kolb Road would vary based on the alternative, turning movement volumes are expected to vary as well. For example, the prohibition of left turns out of the Bashas' shopping center would likely result in those drivers exiting the shopping center onto Territory Drive, then making a left turn onto Kolb Road to travel north. Figure 10 shows the projected traffic volumes and LOS for each of the three alternatives at Kolb Road and Territory Drive. Note that the volumes and LOS for Alternative 1 matches the information shown in Figure 6. The *SimTraffic* reports are included in Appendix B.

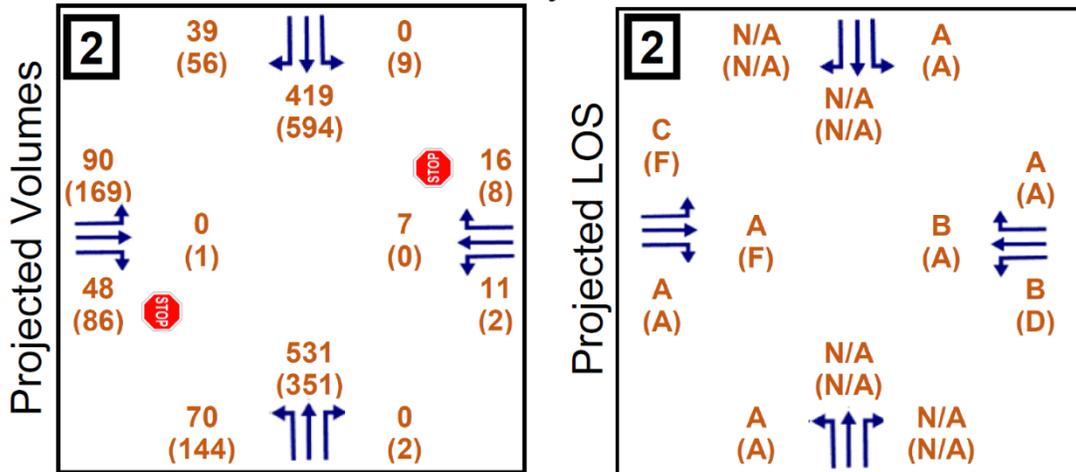

As seen in the figure, Alternative 2 would result in LOS F for the eastbound left turn and through movements in the PM peak hour. However, with Alternative 3, all movements at the intersection are expected to operate at LOS A in both peak hours.

Figure 10. Kolb Road and Territory Drive Projected Future Operations

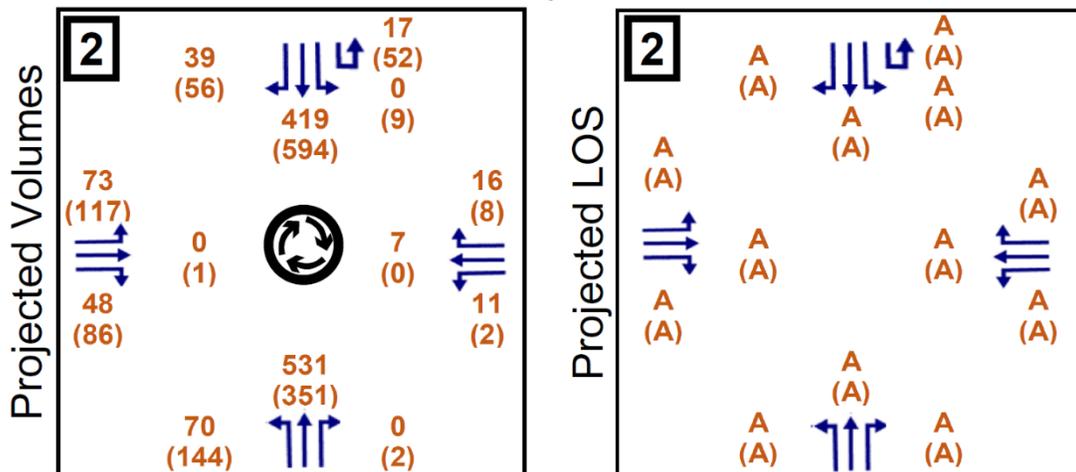

Kolb Rd/Territory Dr - Alternative 1

Kolb Rd/Territory Dr - Alternative 2

Kolb Rd/Territory Dr - Alternative 3

6.3. SAFETY ANALYSIS

A crash safety analysis was conducted for each intersection and for Kolb Road using the Predictive Method for Urban and Suburban Arterials found in the *Highway Safety Manual, 1st Edition*. The predictive method was run for future conditions if the project is completed without new turn lanes or major intersection reconstruction, with the addition of a northbound right turn lane at the Kolb Road/Snyder Road intersection, and with a roundabout at the Kolb Road/Territory Drive intersection. Note that the conditions with the additional improvements assume no other changes in the corridor (i.e. 2040 conditions with a roundabout at Kolb Road and Territory Drive assumes no new right turn lane at Snyder Road). The results are shown below in Table 8.

Table 8. Predicted Crashes per Year for Future Conditions

Roadway Segments	2040 Without Project	2040 with Project
Kolb Rd, Sabino Canyon Rd to Snyder Rd	0.00	3.45
Kolb Rd, Snyder Rd to Territory Dr	0.00	1.58
Kolb Rd, Territory Dr to Sunrise Dr	0.00	0.78
Intersections	2040 Without Project	2040 with Project
Kolb Rd/Sabino Canyon Rd	0.00	2.66
Kolb Rd/Snyder Rd	0.00	2.27/2.21*
Kolb Rd/Territory Dr	0.00	0.69
Kolb Rd/Sunrise Dr	0.00	4.11

*With the project, this will remain 2.27 crashes per year, but if a northbound right turn lane is added at the intersection, the predicted number of crashes will decrease slightly.

The table shows that the predicted number of crashes is expected to decrease with construction of the project compared to the future conditions without the project. The most significant difference is seen on the roadway segments between intersections due to the addition a two-way left turn lane, construction of paved shoulders and the removal and/or protection of roadside obstructions.

As seen in Table 8, the construction of a right-turn lane at the Kolb Road/Snyder Road intersection is predicted to have only a very modest improvement over the project without the right-turn lane. Thus, considering the small safety improvement, the fact that the intersection will operate efficiently with or without the addition of a northbound right turn lane, and the considerable cost which would be associated with the construction at this location, the addition of a right-turn lane at Snyder Road is not recommended.

A comparison of the predicted crashes at the north end of the project is shown in Table 9. As seen in the table, all three alternatives are expected to reduce the number of crashes per year along the segment of Kolb Road between Territory Drive and Sunrise Drive, though Alternatives 2 and 3 are expected to have a greater reduction, likely due to the elimination of left turns at the Bashas' driveway. However, the predicted number of crashes at the Territory Drive intersection would increase with Alternative 2 because of the increased traffic volume. Conversely, the construction of a roundabout (Alternative 3) is expected to result in a significant reduction in the predicted crashes at the intersection, even with the additional volume which would be diverted from the Bashas' Driveway to Territory Drive.

Table 9. Predicted Crashes per Year for Kolb Road/Territory Drive Alternatives

Location	2040 Without Project	2040 with Project (Alt 1)	2040 with Project and Median Island (Alt 2)	2040 with Project and Roundabout (Alt 3)
		% Reduction*	% Reduction*	% Reduction*
Kolb Rd, Territory Dr to Sunrise Dr	1.19	0.98	0.78	0.78
		18%	34%	34%
Kolb Rd/Territory Dr Intersection	1.04	1.04	1.10	0.69
		0%	-6%	34%

*Percent reduction compared to 2040 conditions without project; negative values indicate increase in predicted number of crashes.

7. CONCLUSIONS AND RECOMMENDATIONS

This project consists of widening Kolb Road from two to three lanes between the intersections of Sabino Canyon Road and Sunrise Drive. The project will also include the addition of paved shoulders and improvements to drainage and landscaping, as well as consideration of neighborhood screening and noise mitigation.

Historic data and growth projections in the 2045 PAG model were used to project future traffic volumes for the study year of 2040. Based on that information, Kolb Road is projected to carry approximately 13,200 vehicles per day north of Snyder Road and approximately 14,200 vehicles per day south of Snyder Road.

Because a northbound right turn lane was found to be warranted at the Kolb Road/Snyder Road intersection, two future scenarios were evaluated – one with the turn lane and one without. Both scenarios include the addition of a center two-way left turn lane throughout the project. It was found that all study intersections and Kolb Road will operate efficiently through 2040 with or without the added northbound right turn lane at Kolb Road and Snyder Road.

The safety analysis showed that the project is expected to reduce the overall predicted number of crashes in the project area when compared to future conditions without the project. The addition of a northbound right turn lane on Kolb Road at Snyder Road is expected to further reduce the predicted number of crashes at that intersection, but only slightly (from 2.27 crashes/year to 2.21 crashes/year). In the most recent five years with available data, there was only one northbound crash at the intersection, which may or may not have been related to the right turn movement.

Considering the low number of historic crashes, the fact that the intersection will operate efficiently with or without the addition of a northbound right turn lane, and the considerable cost which would be associated with the construction at this location (given the site constraints), it is not recommended that a northbound right turn lane be constructed at Kolb Road and Snyder Road.

However, the following improvements should be constructed with this project:

- Widen Kolb Road to a three-lane roadway by adding a center two-way left turn lane throughout the project area. This will improve operations and safety by removing turning vehicles from the travel lanes.
- Improve the transition from two to one northbound lanes on Kolb Road just north of Sabino Canyon Road to avoid speeding and safety issues.
- Construct a single-lane roundabout at the intersection of Kolb Road and Territory Drive and extend the raised median from Sunrise Drive further south to the new roundabout to improve safety and access management in the area.
- With the extended median just south of Sunrise Drive, provide additional northbound left turn storage (300 feet total) to serve the projected 95th percentile queue.
- Provide separate bike and right turn lanes for southbound travel at the Bashas' shopping center driveways.
- Include paved shoulders throughout the project area to provide multi-modal connectivity.
- Provide sidewalk along one side of the roadway to provide pedestrian connectivity through the corridor.
- Add street lighting to Kolb Road between Territory Drive and Sunrise Drive, including at the intersection of Kolb Road and Territory Drive.
- Remove, protect, or delineate roadside obstructions.
- Construct a solar powered flasher (or other comparable device, as determined during the design phase) near Fire Station 73 to improve general safety.

Worksheet 2A -- General Information and Input Data for Urban and Suburban Arterial Intersections

General Information		Location Information	
Analyst	MJS	Roadway	Kolb Road
Agency or Company	PSOMAS	Intersection	Kolb Road and Sunrise Dr
Date Performed	07/09/16	Jurisdiction	
		Analysis Year	2040
Input Data		Base Conditions	Site Conditions
Intersection type (3ST, 3SG, 4ST, 4SG)		--	4SG
AADT _{major} (veh/day)	AADT _{MAX} = 67,700 (veh/day)	--	19,242
AADT _{minor} (veh/day)	AADT _{MAX} = 33,400 (veh/day)	--	13,241
Intersection lighting (present/not present)		Not Present	Present
Calibration factor, C _i		1.00	1.00
Data for unsignalized intersections only:		--	--
Number of major-road approaches with left-turn lanes (0,1,2)		0	2
Number of major-road approaches with right-turn lanes (0,1,2)		0	0
Data for signalized intersections only:		--	--
Number of approaches with left-turn lanes (0,1,2,3,4) [for 3SG, use maximum value of 3]		0	4
Number of approaches with right-turn lanes (0,1,2,3,4) [for 3SG, use maximum value of 3]		0	4
Number of approaches with left-turn signal phasing [for 3SG, use maximum value of 3]		--	4
Type of left-turn signal phasing for Leg #1		Permissive	Protected / Permissive
Type of left-turn signal phasing for Leg #2		--	Protected / Permissive
Type of left-turn signal phasing for Leg #3		--	Protected / Permissive
Type of left-turn signal phasing for Leg #4 (if applicable)		--	Protected / Permissive
Number of approaches with right-turn-on-red prohibited [for 3SG, use maximum value of 3]		0	0
Intersection red light cameras (present/not present)		Not Present	Not Present
Sum of all pedestrian crossing volumes (PedVol) -- Signalized intersections only			1
Maximum number of lanes crossed by a pedestrian (n _{lanesx})		--	4
Number of bus stops within 300 m (1,000 ft) of the intersection		0	0
Schools within 300 m (1,000 ft) of the intersection (present/not present)		Not Present	Not Present
Number of alcohol sales establishments within 300 m (1,000 ft) of the intersection		0	0

Worksheet 2A -- General Information and Input Data for Urban and Suburban Arterial Intersections

General Information		Location Information	
Analyst	MJS	Roadway	Kolb Road
Agency or Company	PSOMAS	Intersection	Kolb Road and Sunrise Dr
Date Performed	07/09/16	Jurisdiction	
		Analysis Year	2040
Input Data		Base Conditions	Site Conditions
Intersection type (3ST, 3SG, 4ST, 4SG)		--	4SG
AADT _{major} (veh/day)	AADT _{MAX} = 67,700 (veh/day)	--	19,242
AADT _{minor} (veh/day)	AADT _{MAX} = 33,400 (veh/day)	--	13,241
Intersection lighting (present/not present)		Not Present	Present
Calibration factor, C _i		1.00	1.00
Data for unsignalized intersections only:		--	--
Number of major-road approaches with left-turn lanes (0,1,2)		0	2
Number of major-road approaches with right-turn lanes (0,1,2)		0	0
Data for signalized intersections only:		--	--
Number of approaches with left-turn lanes (0,1,2,3,4) [for 3SG, use maximum value of 3]		0	4
Number of approaches with right-turn lanes (0,1,2,3,4) [for 3SG, use maximum value of 3]		0	4
Number of approaches with left-turn signal phasing [for 3SG, use maximum value of 3]		--	4
Type of left-turn signal phasing for Leg #1		Permissive	Permissive / Protected
Type of left-turn signal phasing for Leg #2		--	Permissive / Protected
Type of left-turn signal phasing for Leg #3		--	Permissive / Protected
Type of left-turn signal phasing for Leg #4 (if applicable)		--	Permissive / Protected
Number of approaches with right-turn-on-red prohibited [for 3SG, use maximum value of 3]		0	0
Intersection red light cameras (present/not present)		Not Present	Not Present
Sum of all pedestrian crossing volumes (PedVol) -- Signalized intersections only			1
Maximum number of lanes crossed by a pedestrian (n _{lanesx})		--	4
Number of bus stops within 300 m (1,000 ft) of the intersection		0	0
Schools within 300 m (1,000 ft) of the intersection (present/not present)		Not Present	Not Present
Number of alcohol sales establishments within 300 m (1,000 ft) of the intersection		0	0
