

## Fiscal Year 22-23 Local Road Repair List Introduction

Pima County has a plan to repair all currently failed and poor roads to achieve an average network Pavement Condition Index (PCI) of 80 by 2030.

Pavement Condition Index (PCI) is determined by an objective analysis that uses ASTM D6433-18 Standard Practice for Roads and Parking Lots Pavement Condition Index Surveys. PCI ranges from zero to 100 with the latter representing new pavement.

### Road Selection Process

In 2019, the Pima County Transportation Advisory Committee (PCTAC) conducted a public survey regarding how to allocate resources for local roads. The overwhelming response was to repair worst roads first. A full discussion on this topic, including budget allocations is available on the [PCTAC](#) web page. As such, the PCTAC adopted the following process for selecting local roads for Fiscal Year 2023:

- Ranking was determined by sorting the list of 1,300 miles of local road segments from worst to best by Pavement Condition Index (PCI)
- Roads of the same PCI were additionally ranked by:
  1. Presence of school crosswalks
  2. Lack of sidewalks
  3. Lot density

Roads in a subdivision will typically have different PCI ratings and because it is not practicable or cost effective to repair one road in a subdivision and then move to another subdivision or local road, the PCTAC provided the following criteria for developing the list that would maximize work with the available repair budget:

1. Select worst ranked road segment from list (the “trigger” road), then select all road segments in same subdivision or contiguous to the trigger road
2. Once all qualifying road segments have been selected, select the next worst road on ranked list
3. When the remaining budget is too small to select the next qualifying worst road on the ranked list and associated subdivision/contiguous segments, skip that worst road and select the next worse road on list

### Road Repair List Organization

The road repair list which follows has the “trigger road” (lowest PCI roadway) for each subdivision highlighted in yellow from lowest to highest PCI order. Roadways which are not related to a subdivision are listed as “Local Road No Subdivision”. Within the subdivisions, all roads associated with the subdivision are listed.
