INTRODUCTION
The Pima County Office of the Medical Examiner (PCOME) investigates any death in Pima County that is sudden, violent, unexpected, or in which the cause of death is unknown. The PCOME also serves as the Medical Examiner (ME) for Cochise and Santa Cruz Counties and performs examinations as needed for eight additional counties. In 2015 there were 9,134 deaths in Pima County; of these 2,437 (27%) were reported to the PCOME for investigation. This annual report consists of three main sections. The first is an overview of the activities and notable events of the office over the course of the report year. The second is a statistical review of the types of cases processed by the office over the same time period. The third is a by-county breakdown of certain death classifications.

OVERVIEW
The PCOME was fully accredited by the National Association of Medical Examiners (NAME) following a two day inspection in October 2011. This accreditation is effective from October 24, 2011 through October 24, 2016 and requires annual accreditation verification. NAME accredited offices represent the highest quality of death investigation systems. There are 69 fully accredited Medical Examiner’s Offices across the United States. The PCOME has the distinction of being the sole fully accredited office in Arizona.

Reportable Deaths
Arizona Revised Statute §11-593 delineates ten circumstances in which a death is reportable to the PCOME.

1. Death when not under the current care of a health care provider as defined pursuant to section 36-301.
2. Death resulting from violence.
3. Death occurring suddenly when in apparent good health.
4. Death occurring in a prison.
5. Death of a prisoner.
6. Death occurring in a suspicious, unusual or unnatural manner.
7. Death from disease or accident believed to be related to the deceased’s occupation or employment.
8. Death believed to present a public health hazard.
9. Death occurring during, in association with or as a result of anesthetic or surgical procedures.
10. Unidentifiable bodies.

Investigations
Our 11 medical investigators processed 2,437 reports of deaths from Pima County and 734 reports from 10 additional Arizona counties in 2015. Jurisdiction was declined in 874 of these cases. A total of 2,007 decedents were transported to the PCOME for examination or storage in 2015.
Examinations
Pima County forensic pathologists and anthropologists performed 1,456 autopsies, 348 external examinations, 290 death certifications, 145 anthropologic examinations, and reviewed 6,323 death certificates for cremations in 2015.

Education, Training and Activities
1) Medicolegal Death Investigators
Calendar year 2012 saw a transition from the term Forensic Medical Investigator (FMI) to Medicolegal Death Investigator (MDI) for our 11 MDIs in keeping with national norms. Eight MDIs, our MDI Supervisor, and Morgue Supervisor are certified by the American Board of Medicolegal Death Investigators to provide competent medicolegal death investigations. PCOME Forensic Pathologists lecture to the MDIs on varying topics monthly. In accordance with our MDI quality assurance and performance improvement program, 10% of reports are pathologist reviewed monthly and 10% of reports are peer reviewed quarterly.

2) Community education, presentations and media interviews
The PCOME receives numerous requests from various groups, organizations, individuals and schools for presentations regarding a host of forensic issues annually. Not all requests can be honored due to time and personnel constraints, but examples of educational activities include but are not limited to: presentations at local primary and secondary schools; lectures at various institutions and departments at the University of Arizona; presentations and tours for humanitarian organizations; and the teaching of a 3-credit-hour death investigation class at Pima Community College. The Chief Medical Examiner recorded 115 media interviews, emails and phone calls over the calendar year. Pima County’s Forensic Anthropologist and Postdoctoral Fellow gave numerous platform and poster presentations to various organizations and at national anthropologic and forensic conferences.

3) University of Arizona College of Medicine, Department of Pathology and School of Anthropology
PCOME Forensic Pathologists hold clinical appointments with the Department of Pathology at the University of Arizona, College of Medicine, where they are involved with pathology resident and medical student teaching. Two pathology residents, seven medical students and two pathology post-sophomore fellows rotated through the PCOME for month-long rotations in 2015. Our Forensic Anthropologist also holds an academic appointment at the University of Arizona and three anthropology interns trained at our facility in 2015.

Law Enforcement and Legal System
The availability of our pathologists to assist or advise law enforcement personnel in their investigations and the legal system in its proceedings is an important function of the PCOME. Involvement of the PCOME in the legal system generally consists of pretrial interviews, depositions and courtroom testimony. In 2015, the office’s six forensic pathologists and two anthropologists participated in a number of pretrial interviews, depositions and jury trials both in Pima and out-of-county cases.
Organ and Tissue Donation
Pursuant to A.R.S §36-861, the PCOME refers death notifications to, and partners with, Donor Network of Arizona (DNA) and other associated tissue research agencies for the coordination and procurement of anatomic gifts. The importance of supporting the efforts of the organ and tissue transplant and research communities in Arizona cannot be understated. Anatomic gifts can be life saving for organ and tissue recipients and these donations are always in short supply.

Organ Donations with PCOME Involvement 2015

The PCOME was involved in 20% of all DNA tissue recoveries in 2015. The average release of tissue for procurement was granted 85% of the time across the state of Arizona in 2014. The release of tissues was granted 95% of the time by the PCOME, significantly above the state average.
Office of the Medical Examiner
Organizational Chart as of December 31, 2015
TOTAL CASES

The total cases handled by the PCOME in a given year are the sum of the ME cases (autopsies, external examinations, and death certificate cases), cases in which jurisdiction was declined, and the number of cases stored at our facility during the calendar year (storage cases). ‘All Counties’ includes cases examined at the PCOME from Apache, Cochise, Gila, Graham, Greenlee, La Paz, Navajo, Pinal, Santa Cruz and Yuma counties in addition to Pima County.

MEDICAL EXAMINER CASES

The PCOME considers all cases in which the cause and manner of death are determined by this office as “medical examiner cases.” Those cases include autopsies, external examinations and death certificate (DC) cases. Autopsies are examinations where a decedent is examined both externally and internally for evidence of injury or natural disease which may have caused or contributed to the individual’s death. External examinations consist of an external examination of the body without the internal examination. A DC case involves review of the medical records, law enforcement reports and any other information that may be necessary to determine the cause and manner of death without physical examination of the decedent. In 2015, for Pima and all other counties listed above, 1456 autopsies, 348 external examinations and 290 DC cases were performed at the PCOME. Pima County alone accounted for 922 autopsies, 294 external examinations and 273 DC cases.
2015 Medical Examiner Cases

Medical Examiner Cases by Age - 2015

**Undetermined Manner of Death**

Deaths in which the manner of death was undetermined accounted for 9% of the ME deaths investigated by the PCOME in 2015. Individuals who died with an undetermined manner were most frequently males (75%), of unknown age (44%) and died from undetermined causes (85%). Many of these deaths represent skeletal remains of undocumented border crossers who died in the deserts of southern Arizona.

**Undetermined Manner of Death by Age - 2015**

- Undetermined: 85%
- Overdose: 9%
- Blunt Force Injury: 3%
- Other: 3%

157 total cases.
OVERDOSE DEATHS

There were 379 deaths attributed to an overdose of either a single drug (211 deaths, 56%) or a combination of drugs (168 deaths, 44%) in 2015. Overdose deaths commonly involved males (56%) between the ages of 50-59 (27%). The majority of these deaths were classified as accidents (82%).

Opiate drugs (heroin, oxycodone, methadone, hydrocodone, morphine, oxymorphone, hydromorphone, tramadol, opiate unspecified) and fentanyl (a synthetic opioid narcotic) accounted for the majority of overdose deaths, either as a single drug or as a component of a poly-drug overdose. Heroin was the most commonly abused illicit drug contributing to death in 2015 followed by methamphetamine.

The number of heroin deaths is likely underreported as heroin is rapidly metabolized to morphine by the body and if the parent compound indicative for heroin (6-monooacetylmorphine) is not present on the toxicology report these deaths may be classified as either morphine intoxication or opiate intoxication.

Acute alcohol intoxication alone, not as component of a poly-drug overdose, accounted for 11 overdose (3%) deaths in 2015.

Fentanyl related deaths more than doubled from 7 deaths in 2014 to 17 deaths in 2015.

**MOTOR VEHICLE RELATED FATALITIES**

Motor vehicle related fatalities accounted for 209 total deaths in 2015. The majority, 138 deaths, were occupants of a motor vehicle involved in an accident (MVA). Of the remaining, 22 were motorcycle accidents (MCA), 38 were pedestrians or bicyclists struck by vehicles and 3 were operating an all-terrain vehicle (ATV). Individuals who died from motor vehicle related fatalities were most frequently males (66%) and between 20-29 years of age (23%).

- Bicyclist: 3 (5%)
- ATV: 1 (1%)
W.H. BIRKBY FORENSIC ANTHROPOLOGY LABORATORY

Forensic Anthropologists at the W.H. Birkby Forensic Anthropology Laboratory within the PCOME performed 145 examinations (biological profiles, trauma evaluations, dental examinations and examinations for identification) in 2015 on human remains of forensic significance. An additional 29 examinations were performed on remains ultimately deemed non-human, prehistoric or otherwise not forensically significant and jurisdiction of the remains was declined (JD) in those cases.

The extent of postmortem decomposition of a particular set of remains is important when performing a Forensic Anthropology (FA) examination. Remains examined by Forensic Anthropologists were categorized as minimally decomposed, decomposing, mummified, skeletal or burnt. In 2015, skeletal remains comprised 63% of FA examinations. Four main types of exams are performed; biologic profiles, dental, trauma and identification examinations.

Biological profiles refer to charting, measurements, descriptions, radiographs and photographs taken to estimate sex, age, ancestry, stature and postmortem interval of a set of remains. Dental and identification examinations entail charting, descriptions, radiographs and photographs in an effort to identify an unknown individual or confirm a suspected identity. Trauma examinations entail charting, measurements, descriptions, radiographs and photographs to characterize the nature of an injury, implement used to cause injury to the bone, age of injury, etc. It is common for a particular set of remains to receive more than one type of examination. Most (92%) FA exams include a biological profile with dental examination (88%) when applicable. Less common are examinations for identification (12%) or trauma (14%) with or without biological profiles and dental examinations.

Number of FA Exams 2007 - 2015

![Graph showing the number of FA exams from 2007 to 2015, with a peak in 2011 and a decline in 2015. Exams are represented by blue bars, and JD by red bars.](image)

- Trauma: 20
UNDOCUMENTED BORDER CROSSER (UBC) REMAINS

The term ‘UBC’ refers to foreign nationals who die attempting to cross the southern Arizona desert without permission from the United States government. Calendar year (CY) 2010 saw the highest number of UBC recoveries (223) recorded at the PCOME as compared to the annual average (171 recoveries per year on average from 2002 - 2015). The PCOME has received 2,465 recovered remains of suspected UBCs since 2001. The recoveries per year are adjusted annually to account for the association of remains found months or years apart later discovered to be that of the same individual.

There were 138 UBC recoveries in calendar year 2015. As is the historic norm, UBC recoveries peaked during the warmer months (June – Sep) with 80 recoveries (58% of total for year) in 2015. Many remains are not identifiable due to postmortem changes and efforts by UBCs to obscure their identities. Of the decedents who were identified, 39% (22 decedents) were between 30-39 years of age. Additionally, 86% (119) of the recovered remains, identified or unidentified, were males, 8% (11) were females and 6% (8) were of unidentifiable sex.

Since the exact date and time of death of found remains are often unknown, PCOME staff determine a ‘postmortem interval (PMI)’, which is an assessment of what period of time elapsed from death to recovery of the remains. A 1-8 body condition scale was developed in 2013 to provide a more objective measure of the PMI. The PMI is an estimate and therefore subject to error. The PMIs for the body condition categories are listed following the Condition of Recovered UBC Remains table on page 32 of this report. In 2015, 19 remains (condition 1) were found within less than a day of death (14%), 48 remains (conditions 2-4) were found with a few days up to a few weeks from death (35%), and skeletal remains (body conditions 5-7) accounted for 70 (51%) of the recovered remains.

The cause of death was undetermined in 72% (100) of cases, primarily due to limitations of examination of decomposed and skeletal remains. Of the remainder, environmental exposure to extremes in heat or cold combined with dehydration comprised 20% (28) of deaths. Other, less frequent, causes of death included blunt force injuries from falls or motor vehicle accidents (4), drowning (3), gunshot wound injuries (1 case), electrocution (1), and envenomation (1).

In 2015, 49 (89%) of identified UBCs were of Mexican nationality, followed by Guatemalans (2 or 4%), Hondurans (2 or 4%) and Salvadorans (2 or 4%). Since 2001, identified UBCs of Mexican nationality have been the most numerous (1,338, 85%), followed by Guatemalans (131, 8%) and Salvadorans (42, 3%). Of the 2,469 decedents since 2001, 1,578 (64%) have been identified, 309 (20%) by DNA comparison to a family or law enforcement reference sample. As of December 31, 2015, 887 decedents remain unidentified.

Apache County

Apache County contracts with an appointed non-Forensic Pathologist physician(s), termed an Alternate Medical Examiner(s) (AME) (A.R.S. §11-591); who triages, investigates and certifies deaths that fall under the jurisdiction of the medical examiner in Apache County. The Apache County AME does not perform autopsy examinations and if the AME deems an autopsy is necessary to certify the cause and manner of death, the decedent may be referred to the PCOME for an examination and death certification. The PCOME is not aware of how many deaths occurring in Apache County are reported to the Apache County AME, nor the total number or types of deaths certified by the AME. The PCOME only has a record of deaths reported to, or referred for examination to Pima County. Deaths on Native American tribal lands do not have to be reported through the respective death investigation system of that County and may be reported directly to the PCOME as necessary for the needs of the appropriate agency investigating that death (Bureau of Indian Affairs (BIA), FBI or local tribal police departments).

Seventeen deaths from Apache County were reported to the PCOME in 2015, sixteen of which required autopsy examinations. Some pertinent statistics regarding these deaths are detailed in the tables and graphs below.

Cochise County

Cochise County contracts with the PCOME to certify deaths that fall under the jurisdiction of the medical examiner in Cochise County. Cochise County does not maintain an in-county Medical Examiner’s office to conduct death scene investigations, transport remains, or triage deaths reportable to the medical examiner. Cochise County does provide third party transportation services, local law enforcement death scene investigation and archival support for examinations that occurred prior to July 1, 2012. The PCOME works closely with Cochise County law enforcement agencies, the public fiduciary office and funeral homes to facilitate investigations, disposition of remains and transportation respectively. The PCOME is also involved as needed with mass fatality planning, child fatality review, or other medical examiner related issues in Cochise County.

In calendar year 2015 there were 1289 deaths in Cochise County; of these 270 (21%) were reported to the PCOME for investigation and/or examination. Some pertinent statistics regarding these deaths are detailed in the tables and graphs below.

Gila County

Gila County contracts with an appointed Forensic Pathologist Medical Examiner, who triages, investigates and certifies deaths that fall under the jurisdiction of the medical examiner (ME) in Gila County. The Gila County ME performs some autopsy examinations in Payson if the ME deems an autopsy is necessary to certify the cause and manner of death. Additionally, the ME may refer some decedents from southern Gila County to the PCOME for an examination and death certification as necessary. The PCOME is not aware of how many deaths occurring in Gila County are reported to the ME, nor the total number or types of deaths certified by the ME. The PCOME only has a record of deaths reported to, or referred for examination to Pima County. Deaths on Native American tribal lands do not have to be reported through the respective death investigation system of that County and may be reported directly to the PCOME as necessary for the needs of the appropriate agency investigating that death (BIA, FBI or local tribal police departments).

Thirty two deaths from Gila County were reported to the PCOME in 2015, 31 of which required autopsy examinations. Some pertinent statistics regarding these deaths are detailed in the tables and graphs below.

Pima County

TOTAL MORTALITY

The number of deaths reported to the medical examiner’s office in a given time frame is a reflection of the total population that the office serves. In 2015 there were 9,134 deaths in Pima County; of these 2,437 (27%) were reported to the PCOME for investigation.

Pima County Mortality by Year 2006 - 2015*

*Arizona Department of Vital Statistics as of 06/06/16

TOTAL CASES

The total cases handled by the PCOME from Pima County in a given year are the sum of the ME cases (autopsies, external examinations, and death certificate cases), cases in which jurisdiction was declined, and the number of cases stored at our facility during the calendar year (storage cases).
MEDI CAL EXAMINER CASES

The PCOME considers all cases in which the cause and manner of death are determined by this office as “medical examiner cases.” Those cases include autopsies, external examinations and death certificate (DC) cases. Autopsies are examinations where a decedent is examined both externally and internally for evidence of injury or natural disease which may have caused or contributed to the individual’s death. External examinations consist of an external examination of the body without the internal examination. A DC case involves review of the medical records, law enforcement reports and any other information that may be necessary to determine the cause and manner of death without physical examination of the decedent. In 2015, 922 autopsies, 294 external examinations and 273 DC cases were performed on deaths from Pima County.
2015 Pima County Medical Examiner Cases

**UNDETERMINED MANNER OF DEATH**

Deaths of undetermined manner accounted for 9% of the deaths investigated by the PCOME in 2015. Individuals who died with an undetermined manner were most frequently males (77%), of unknown age (53%) and died from undetermined causes (88%). Many of these deaths represent skeletal remains of UBCs who died in the deserts of southern Arizona.

Total: 117 cases
OVERDOSE DEATHS

There were 262 deaths attributed to an overdose of either a single drug (138 deaths, 53%) or a combination of drugs (124 deaths, 47%) in 2015. Overdose deaths commonly involved males (56%) between the ages of 50-59 (28%). The majority of these deaths were classified as accidents (82%).

Opiate drugs (heroin, oxycodone, methadone, hydrocodone, morphine, oxymorphone, hydromorphone, tramadol, opiate unspecified) and fentanyl (a synthetic opioid narcotic) accounted for the majority of overdose deaths, either as a single drug or a component of a poly-drug overdose. Heroin was the most commonly abused illicit drug contributing to death in 2015 followed by methamphetamine.

The number of heroin deaths is likely underreported as heroin is rapidly metabolized to morphine by the body and if the parent compound indicative for heroin (6-monoacetylmorphine) is not present on the toxicology report these deaths may be classified as either morphine intoxication or opiate intoxication.

Acute alcohol intoxication alone, not as component of a poly-drug overdose, accounted for 6 overdose (2%) deaths in 2015.

MOTOR VEHICLE RELATED FATALITIES

Motor vehicle related fatalities accounted for 121 total deaths in Pima County in 2015. The majority, 70 deaths, were occupants of a motor vehicle involved in an accident (MVA). Of the remaining, 16 were motorcycle accidents (MCA), 33 were pedestrians or bicyclists struck by vehicles, and 2 were all-terrain vehicle (ATV) accidents. Individuals who died from motor vehicle related fatalities were most frequently males (70%) and between 20-29 years of age (22%).

- ATV: 2 fatalities (2%)
Pinal County

Pinal County contracts with the PCOME to provide examination or other support services beyond what Pinal County provides internally. Pinal County maintains its own Medical Examiner’s office staffed to conduct death scene investigations, transport remains, assist with the performance of some external examinations at the OME facility in Pinal County, and triage deaths reportable to the ME as stated in A.R.S §11-593 above. Not all deaths in Pinal County are reported to the PCOME through the Pinal County Medical Examiner’s Office. Deaths on Native American tribal lands do not have to be reported through the respective death investigation system of that County and may be reported directly to the PCOME as necessary for the needs of the appropriate agency investigating that death (BIA, FBI or local tribal police departments). The Pinal County Medical Examiner’s Office issues its own annual report. Please reference that report for details concerning deaths occurring in Pinal County that are not referred to the PCOME.

In calendar year 2015 there were 2911 deaths in Pinal County; of these 264 (9%) were reported to the PCOME for examination. Some pertinent statistics regarding these deaths are detailed in the tables and graphs below.

Santa Cruz County

Santa Cruz County does not maintain an in-county Medical Examiner’s office to conduct death scene investigations, transport or examine remains, or certify deaths reportable to the medical examiner. Nor does Santa Cruz County appoint or contract with an Alternate Medical Examiner. The PCOME acts as the de-facto appointed ME for Santa Cruz County. When deaths occur in Santa Cruz County pursuant to A.R.S. §11-593, Santa Cruz County law enforcement agencies investigate the circumstances of the death and notify the PCOME as necessary.

In calendar year 2015 there were 291 deaths in Santa Cruz County; of these 55 (19%) were reported to the PCOME for investigation and/or examination. Some pertinent statistics regarding these deaths are detailed in the tables below.

Yuma County

Yuma County contracts with the pathology group at Yuma Regional Medical Center to perform examinations and certify deaths that fall under the jurisdiction of the medical examiner in Yuma County. Some decedents (typically suspected homicides) are referred to the PCOME for an examination and death certification at the discretion of the Yuma County Medical Examiner’s Office. The Yuma County Medical Examiner’s Office issues its own Annual Report. Please reference that report for details concerning deaths occurring in Yuma County that are not referred to the PCOME.

Five deaths from Yuma County were reported to the PCOME in 2015, all five of which required autopsy examinations. Some pertinent statistics regarding these deaths are detailed in the tables below.

*Arizona Department of Vital Statistics as of 06/02/2016
